# WHO WE ARE

## The people and companies of Tweeter Home Entertainment Group.

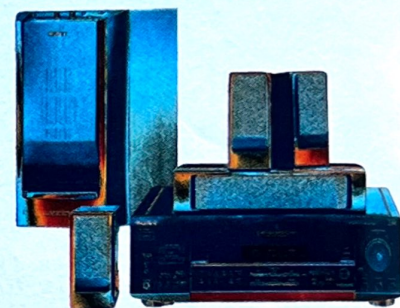

### WHO IS TWEETER HOME ENTERTAINMENT GROUP?

Tweeter Home Entertainment Group is the fastest growing chain of consumer electronics stores in the United States and parent company of Tweeter etc., a 26-store New England retailer of high quality audio, video and mobile electronics products. In 1996, Tweeter Home Entertainment Group acquired the 13-store Bryn Mawr Stereo and Video Chain headquartered outside of Philadelphia, Pennsylvania. Today that chain has grown to 20-stores throughout Pennsylvania, New Jersey, Delaware and Maryland.

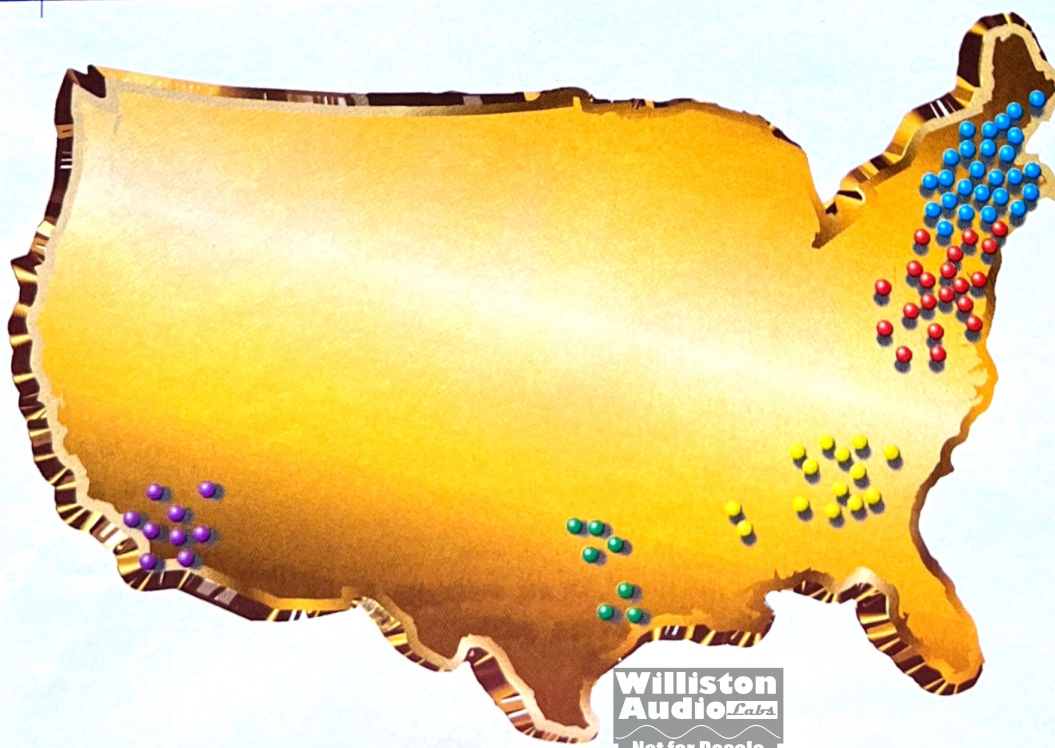

**Intent on spreading our unique blend of high quality merchandise and product expertise,** Tweeter Home Entertainment Group purchased the HiFi Buys chain in Atlanta in June of 1997 and expanded its reach into Alabama. Today, Tweeter also owns Home Entertainment with seven stores in Dallas and Houston not to mention its newest acquisition, Dow Stereo and Video with nine locations in southern California.

Presently we operate five chains nationally; **Tweeter**, **Bryn Mawr**, **Hi-Fi Buys**, **Home Entertainment**, and **Dow Stereo & Video**.

**We take great pride in our industry-wide reputation for the expertise of our salespeople and superior customer service.** Tweeter is a multiple recipient of the prestigious "Consumer Electronics Retailer of the Year" award presented by AudioVideo International, the country's leading magazine for domestic retailers and manufacturers of audio and consumer electronic products.

# And in Massachusetts, introducing the Tweeter Center for The Performing Arts

## **Its where the music takes you.**

*Tweeter Home Entertainment Group is committed to bringing you the music indoors and out.*

*No where is this more evident than at the Tweeter Center for the Performing Arts, one of the nation's premier amphitheaters. Located outside of Boston, the Tweeter Center regularly welcomes hordes of music fans to fill its 20,000 seats and see chart topping performers. The 1999 season proved to be at the center of New England entertainment with high energy performances by Jimmy Buffett, Paul Simon and Bob Dylan, Lillith Fair, REM and many other must-see shows. **Enjoy the music.***

**So whether its Vaughan or Vivaldi,  
Jazz or Country, Pop or Rock it's  
at the Tweeter Center.**

## **A NOTE FROM JEFF**

*When I reflect back on the technological changes that have occurred throughout the 20th century, I am awed by what has happened. Technology has improved our world. It has saved and prolonged our lives. It has given us the luxuries of time, money and energy. It has made some aspects of daily living easier - and complicated others. Technology has made sense of what was once a mystery and has made the unreachable, readily available.*

*And technology shows no signs of stopping as we look toward the next century!*

*I am personally excited about what lies ahead. And professionally I'm proud to be a part of it. The consumer electronics industry is moving at break neck speed. Digital is taking over. Pictures are sharper. Sound is clearer. Designs are sleeker. Equipment is more user friendly and fits into your world instead of the other way around. And the best news of all? Prices on some pretty amazing technology are falling as the spectacular goes mainstream.*

*Just like you, I sometimes get nervous about all this new technology. Will something I buy today be useless by 2001? Will I constantly have to upgrade to keep up with these new advancements? Speaking from the consumer electronics world, I can tell you - FEAR NOT!*

*Our manufacturers work hard to bring you the latest in audio and video, but not at the expense of your current equipment. Many products are now downwards compatible so they actually work with your current systems. Others products can be upgraded with the addition of some minor equipment.*

*This catalog contains a sampling of some of the newest technology to hit the market. Browse through it, then stop in any of our stores. Get face to face with new technology. See how it works and talk to our salespeople. They'll be happy to show you how it works and answer your questions. Trust me - they love this stuff as much as you will. Whether you're in the market or merely curious, we've got a lot to show you.*

*New technology is here. It's just waiting for you.*

*Sincerely,*

*Jeff Stone*

Jeff Stone

President, Tweeter Home Entertainment Group

## Let's Go Get High... Definition!

### DOES THE WORLD NEED DIGITAL TV?

For some people, the analog system we currently enjoy is "good enough". To an AV enthusiast, however, "good enough" is never enough. And high-definition digital TV is the **quantum leap forward** that we've been anxiously awaiting. Yet in all truthfulness, the U.S. launch of broadcast digital television (DTV) in November of 1998 was a near non-event. At that time fewer than 10 stations nationwide were equipped to broadcast digital signals. The handful of viewers possessing hideously expensive first-generation digital sets had to suffer through endlessly repeated program loops, or settle for simulcasts of a station's analog feed digitally "upconverted" to simulate high-definition TV. Either way, it was a poor way to raise a buzz around what is, nevertheless, perhaps the most exciting technology of all time.

### THAT WAS THEN. THIS IS NOW.

In the intervening year the DTV landscape has changed considerably. Not only have the hardware options available to consumers multiplied dramatically but the number of DTV stations in operation has swelled to 71, according to the National Association of Broadcasters. If you live near a major metropolitan area, your prospects for receiving at least some DTV broadcasts are currently quite good.

The U.S. DTV standard consists of 18 distinct possible signal formats. Of these, only four are of any real interest to consumers shopping for a digital set: 1080i, 720p, 480p, and 480i.

The 1080i and 720p formats both qualify as "high-definition TV" or HDTV. (Let's tackle the near-universal confusion right here: All U.S. HDTV is digital-TV, but not all DTV necessarily is high-definition.) The "i" and "p" stand for interlaced and progressive: An interlaced display's electron gun **"draws" the scan-lines that**

**make up its image across the picture tube face 60 times a second —** but only every other line per 1/60th of a second, with alternate 1/60ths seeing a second pass to fill in the blanks. The process occurs so rapidly that the eye doesn't detect gaps in the image, permitting a "slower" system to produce sharp, **flicker-free images.**

With progressive-scan displays — a category that includes the computer monitor sitting on your desk — all of the scan-lines are drawn sequentially across the face of the picture-tube, in this case, 60 times a second. As a result, the scan-lines are far less visible, even close up, so images appear solid and are still flicker-free. This is why proponents of DTV's progressive-scan formats claim that their babies deliver

### BETTER IMAGE QUALITY THAN INTERLACED FORMATS, PARTICULARLY FOR MOTION PACKED PROGRAMS LIKE SPORTS.

Regardless of how any high-definition program is produced (whether live or to tape), the choice of which signal-format with which ultimately to broadcast it rests with individual networks. At present, ABC and FOX both use 720p exclusively for all their high-definition broadcasting. CBS, NBC, and PBS, meanwhile, have all opted thus far to broadcast all their DTV in 1080i.

Regardless of picture format, DTV specification's call for all programs to include a Dolby® Digital soundtrack, which may include up to 5.1 surround channels, a most appealing feature to home-theater fans. Further down the road, when the market for digital broadcasting becomes better defined, viewers can expect broadcasters to add data/interactive services such as selectable local weather forecasts and home shopping.

Both direct-view and rear projection HDTV sets are now available from most of the major video brands. Other options include flat panel plasma displays and front projectors. Despite its seductive slimness (usually about four inches), plasma sets remain costly due to the comparatively low factory yield.

HDTV-capable front projectors generally cost considerably more than direct-view and rear-projection sets and just about require professional installation. Nonetheless, a suitable front projector is still the display most able to deliver a fully detailed high-definition image, but the price of admission is high. That said, the best of the available direct-view and rear projection sets already come very close indeed.

Displaying DTV is one thing, receiving it is another. Televisions that can receive and display digital broadcasts right out of the box are called integrated-DTV sets. These contain the necessary DTV tuner/decoder, requiring only an antenna and a DTV signal of sufficient strength.

## Models lacking the internal tuner/decoder are termed HD-ready.

for cash-strapped consumers (or those beyond current DTV reach), relatively inexpensive HD-ready sets — relative, that is, to integrated sets — make a good TV-purchase option.

Your HD-ready TV, which is fully analog-NTSC compatible, works well with today's movies on DVD, satellite or cable; when your town begins receiving worthwhile DTV broadcasts, you purchase an external decoder. Thus far, all HD-capable front-projection systems are HD-ready separate video-monitor designs, while direct-view and rear projection high-definition models are about equally split between integrated and HD-ready layouts.

**FOR FIFTY YEARS,** TV screens have almost universally followed the squarish, 4:3 aspect ratio — 16 inches across by 12 inches high, say, for a 25-inch (diagonal) set — defined for the current standard. DTV, however, calls for programs to be produced in a wider 16:9 format approximating movie-screen geometry. Caught between an old but very much alive-and-kicking world of 4:3 programming and the new widescreen world of HDTV, many manufacturers have chosen to produce both 4:3 and 16:9 widescreen DTV models. Some 4:3 sets, however, may not be equipped to deliver the full resolution contained in a 16:9 high-definition image,

### SO MOST BUYERS' SAFEST BET WILL BE A WIDESCREEN SET.

Set-top HDTV tuner/decoders are also available from many major TV manufacturers. Some include a variety of video-output formats and thus can work with different-brand sets; others rely on proprietary control connections exclusive to their makers' HD-ready TVs.

Another wrinkle: Not all decoders are able to pass every

DTV format on to the display in its native resolution. For

example, some models pass both 1080i and 720p high-definition,

as well as standard-definition 480p and 480i formats. Other decoders pass

"native" 1080i HDTV signals and 480p standard-definition as broadcast,

but convert 720p signals to 1080i resolution. There are even a few

that convert all signal-formats to 1080i.

**Before springing for a decoder, make a point of carefully examining its specifications to make sure it provides the type of signal output that you seek.**

A last decoder aspect to consider is video-output format. Most models supply component video outputs, a three-RCA-jack system that's the most widespread video interface used in HD-ready TVs, and that should work with nearly all HD-ready rear projection and direct-view sets. For use with a front

projector, however, it's a good idea to choose a decoder equipped with a computer-style RGB output — nearly all projectors include this, but only some also feature a component-video trio. Several major brands now offer, or plan to deliver, HDTV decoder/satellite-receiver combos; most include component video outputs.

## SOUND COMPLICATED?

**WELL, ERR, UMM... YEAH, IT IS.**

**BUT DON'T PANIC: HIGH-DEFINITION TV**

**IS IN YOUR FUTURE, BE IT NEAR OR FAR.**

**AND LIKE NEARLY EVERY NEW**

**TECHNOLOGY FROM THE WHEEL TO**

**THE PERSONAL DIGITAL ASSISTANT,**

**THE COMPLICATION-FACTOR**

**QUICKLY FADES, A PROCESS DTV**

**IS ALREADY EXPERIENCING.**

## what's on?

### VIEWERS WHO WERE THERE TO TUNE IN THE FIRST OFFICIAL HDTV BROADCASTS

are by now exceedingly familiar with the Rose Bowl Parade, the '98 Winter Olympics and a particular space shuttle blastoff. Why? Because there wasn't a lot of high-definition programming available at the time, so most stations looped the same footage over and over.

### That situation promises to change.

In Fall of 1999, select CBS and ABC affiliates began broadcasting key prime-time offerings in high-definition. Enough so that viewers tuning a CBS DTV channel can expect 12 hours of HDTV per week, including several new series and popular fare like *Chicago Hope*, *Nash Bridges* and *The King of Queens*. CBS also plans to air a number of movie specials in high-definition.

### For ABC, the major draw will be (drum roll, please)... football!

The network plans to broadcast its entire run of Monday Night Football in the 720p HDTV format, concluding with, and you guessed it, Super Bowl

XXXIV. ABC will also continue to air movies and episodes of *The Wonderful World of Disney* in high-definition.

Elsewhere on the HDTV airwaves, viewers can expect to find **The Tonight Show weeknights on NBC, select movies on Fox and a number of documentaries and music specials on PBS.**

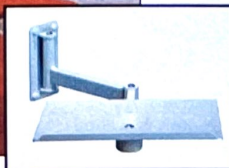

Viewers wired with DirecTV® can also look forward to getting some high-definition. The service plans to deliver at least one channel of "HBO-HD", with additional channels slated to arrive in the winter of 2000. A new dish and receiver are both likely to be required to receive the high definition DBS programming.

Little by little, the DTV future is coming into focus. The FCC has mandated that all broadcast TV stations, commercial or not, must broadcast the same programming on their digital channel as is broadcast on their analog channel by May 1, 2003. When that day arrives, **THERE SHOULD BE ENOUGH DTV PROGRAMMING TO SATISFY EVEN THE MOST ARDENT CHANNEL-SURFER.**

## now watching tv is an uplifting experience

### Vogel's Evolution line of audio and video supports will add a new dimension to your interior.

Vogel's offers a wide range of TV swivel arms and wall supports suitable for various television sizes, including widescreen (16:9 aspect ratio). Vogel's also carries wall supports for audio and video equipment. Made of the most durable materials, every Vogel's product goes through stringent testing and is guaranteed for quality and safety. From modern to classic, Vogel's fits any style and any space.

# VOGEL'S

Not for Resale

## Is all this Digital stuff for real?

We have a reputation for bringing new entertainment technology to our customers. Witness the VCR, compact disc player, digital satellite system and the DVD player. But we won't offer new technology to our customers merely because it's new. For a variety of reasons, some new formats and technologies are introduced but never adopted. Eventually, they fall by the wayside. Remember the L-Cassette, quadraphonic sound, and most recently, the digital compact cassette? Consider this as we tell you, HDTV is here to stay. Believe it.

And check out our proposed DTV timeline.

### 1981

Analog high definition television system requiring 30MHz of channel spectrum first shown outside Japan.

### 1982

Advanced Television Standards Committee (ATSC) established.

### January 1987

National Association of Broadcasters arranges HDTV demonstration for the FCC and Congress.

### 1987

FCC establishes Advisory Committee on Advanced TV (ACATS).

### 1988

Broadcasters establish the Advanced TV Test Center (ATTC). Soon after, 21 advanced television proposals are submitted to ACATS/ATTC for adoption.

### March 1990

FCC develops policy-establishing foundation of 6MHz channel spectrum and only true HDTV

### February 1993

All digital system is deemed acceptable for platform.

### May 1993

Seven companies with competing systems form Grand Alliance.

### March-July 1995

Grand Alliance system is tested.

### November 1995

ACATS report submitted to FCC (simultaneous submission of ATSC DTV Standard).

### December 1996

FCC adopts ATSC Digital TV standard including method for video and audio compression, data transport structure, and modulation technique, but does not mandate any video format (HDTV is no longer required) or any standard for cable, satellite or other broadcast media.

### April 1998

FCC begins allocating channel spectrum to broadcasters for DTV signals.

### November 1998

Network broadcasters in the top 10 markets volunteer to begin DTV broadcasting.

### May 1999

Network stations in top 10 markets must simulcast at least half of their analog programming on DTV.

### November 1999

Network stations in the next 10 markets must broadcast DTV.

### May 2002

All commercial station must start DTV.

### May 2003

Non-commercial stations must begin DTV broadcast with 50% simulcasting of analog programming.

### April 2004

All stations must broadcast at least 75% of their analog programming on DTV.

### April 2005

All station must broadcast all programs in both analog and DTV.

### December 31, 2006

Target date for all stations to cease analog broadcasting and relinquish their analog channels. It is doubtful that this deadline will be met.

# HIGH DEFINITION TV

high definition televisions are revolutionizing TV by delivering the brightest and sharpest pictures ever.

## Mitsubishi Diamond Series 73" 16:9 High Definition 1080i Upgradable Projection Television

**HDTV**

You don't merely watch the game on this 53-inch projector, you are part of it. The images are so true and so real, you can be antagonized or have your spirits lifted. It is the full experience. And with a 3D digital comb filter, the players will be crisp and clear. It has a traditional 4:3 screen format and it utilizes digital auto convergence. It comes with component video and 1080i digital input. Integrated high contrast protective screen. Dimensions: 55" x 46" x 24" (HWD)

This set, when used with an appropriate HDTV receiver, provides full HDTV performance. Get the maximum in convenience when connecting to a variety of HD and SD source components with the included high definition component video and high definition RGB input capability. The second generation DiamondDigital Pixel Multiplier™ gives you both a smoother and sharper image with better contrast. This means what you see will look more 3D and life-like. You also have greater flexibility with Super Quick View, a unique, easy to use system of assigning both analog and digital channels to memory for rapid access to your favorite channels. Also comes with dual tuner P-I-P, 3D Y/C comb filter and an illuminated multi-brand remote. Dimensions: 50 13/32" x 42 5/16" x 23 5/8" (HWD)

You'll be enjoying the view with this HDTV 1080i upgradable TV. The 16:9 aspect ratio means no more letterboxed movies. Now you can watch a movie the way it was meant to be seen. The pure flat faceplate means it's anti-reflective and won't leave harsh glares no matter what the lighting. The 3D Y/C comb filter means your picture is as sharp as it is clear. The horizontal and vertical edge correction ensures corner to corner focusing. Comes with four sets of A/V input jacks, three S-video input jacks, three sets of component video inputs and a remote control.

Dimensions: 25.1" x 34.4" x 22" (HWD)

**SDTV**

Finally a digital ready big screen TV that will fit in any room. This 42-inch Flat Panel TV from Sony is only 6 inches deep and weighs less than 100 pounds. Imagine hanging your TV on your livingroom wall. Never again will you have to match your furniture to your TV. The built-in anti-glare screen diffuses reflective light for increased installation options. Improved scan converter handles sources from 15kHz to 100 kHz. This SDTV ready television allows you tremendous flexibility for hook up to your home theatre system. A full array of composite, s-video, and RGB/component inputs allow you to maximize the performance of your equipment. The Flat Panel Monitor also allows for either standard 4x3 or widescreen 16x9 viewing options. Forward compatibility is another great feature built into this set with an input slot designed to accommodate many future applications.  
Dimensions: 25" x 40 3/4" x 6-3/4" (HWD)

**SDTV**

LCD front projection goes to the next level with this SDTV ready widescreen 480p compatible projector. When combined with a compatible SDTV decoder, digital TV broadcasts are automatically displayed in widescreen 480p, for super crisp image quality. Gamma Enhancement Brighteners darken portions of a scene to create more depth and a richer image. The state-of-the-art active polysilicon LCD and metal halide light source combine to produce extraordinary images with more than 16 million colors that are extremely accurate and bright. Multi-picture capability for single tuner P-I-P and Picture out of Picture.

Goldfinger available on DVD.

# Guess what? The Digital Millennium is here.

As the calendar changes, so too will our culture's perception of **HOME THEATER TECHNOLOGY.** As DVD settles into the mainstream in the new millennium, Laserdisc will drift into obscurity – a 20th century fad akin to the hula-hoop. And VHS will show signs of bowing to the competition. By January 1, 1999, there were over a million DVD players installed in homes across the world. If industry predictions pan out, by January 1, 2000, that figure will exceed five million. And DVD will become the most successful consumer electronic product ever launched.

Yes, the DVD is the present and the future of home theater technology. But, while it has become part of our culture, there is still a large faction of film-lovers who doesn't understand what DVD can do for them.

**Offering almost 500 lines of resolution, the digital DVD picture far surpasses** that of its analog predecessors (VHS and even Laserdisc). The picture is clear and consistent, free of the tiny white specks that make for a watered down and murky picture. The DVD's digital picture is fresh and vivid. The colors recorded are the colors that you see. Hence, the film that you watch is the film that was intended.

Not to mention, the film that you hear. The best DVD titles have Dolby® Digital soundtracks, which provide 5.1 channels of surround sound. The front left and right channels carry much of the music. The center channel provides articulate dialogue. And the rear surround channels provide room ambience, as well as special effects. Don't forget the subwoofer channel, which provides the **DEEP THUNDEROUS**

**BASS** that can make or break an action movie. Although most current movies have 5.1-channel soundtracks, many older ones do not. Dolby Digital encoding can also be used to record fewer channels of audio, including "2.0" soundtracks that contain Dolby ProLogic surround information. Although, a predecessor of Dolby Digital, ProLogic still contains a dedicated dialogue channel to anchor the voices of the actors on screen, as well as a rear effects channel that helps draw you into the action. You can check the movie's jacket to see exactly which type of surround information is present.

In any event, you can rest assured that, since all DVD movies have digital audio sound, the sound you hear will still be state-of-the-art.

**The DVD experience extends beyond the film quality.**

**Outtakes, original trailers, director's comments, deleted scenes and choice of aspect ratio are all features that contribute to the DVD being the all-encompassing film experience.**

It is a combination of these factors that has launched the DVD into the mainstream. How main stream? Well, it doesn't get much more conventional than your local video store. Virtually every video store has a DVD section these days, including most Blockbusters. If not, purchase your titles at Tower Records, on-line at [DVExpress.com](http://DVExpress.com) or rent them on-line at [Netflix.com](http://Netflix.com).

Of course, the DVD's hold on the present market hasn't loosened its grasp on the future. DVD audio promises to keep audiophiles on their toes over the next few years. Not only is it expected to sound better than today's stereo CDs, but it seems likely that a great number of recordings will take advantage of DVD audio's multi channel capabilities. Just imagine how 5 or 6 channels of

**AWESOME QUALITY SOUND COULD MAKE YOU FEEL AS IF YOU ARE AT A LIVE PERFORMANCE.**

Also, DVD audio will be able to hold additional information. This could mean anything from an artist biography to a video accompaniment. (See page 69 for more on DVD audio.) When this book went to press (early October), it looked like Panasonic was going to make progressive scanning a reality in some of their DVD systems. This step up from interlaced scanning will cut down on flickering and create more of a movie theater picture.

The question that used to surround DVD was, whether or not it could overtake VHS's hold on our film culture. But as DVD technology leads the march into the new millennium, it seems to be giving its response – and the public seems to agree.

The Internet is becoming an increasingly popular venue for DVD movie shopping. [DVExpress.com](http://DVExpress.com) offers over 3,200 titles, which can be shipped to your home within a week. And if you decide to buy a DVD player from us, [DVExpress](http://DVExpress.com) will help you start your movie collection.

Scream and Species are available on DVD.

## And now for the techno stuff

### Component Video Output

*This high-end connector delivers the best possible picture to your TV.*

### Composite (RCA) Outputs

*Standard jacks which are used to hook-up audio and video components to each other.*

### Dolby® Digital

*A superior sound experience. Six independent channels of information: Two front speakers, two rear speakers, a center channel speaker and a separate subwoofer speaker. Allows sound to move in every direction, instead of just back and forth.*

### Dolby® Digital Decoder

*A player with this built-in decoder can be connected to your Dolby Digital Ready receiver for 5.1 channel surround sound.*

### DTS® (Digital Theater Systems)

*Like Dolby Digital, it utilizes a 5-channel format plus separate subwoofer output. But it delivers higher resolution sound, up to 24-bit/96 kHz audio as opposed to the standard 16-bit/44.1 kHz found in most digital systems. Each channel is audibly superior to other systems.*

### DTS® Capable

*These DVD players can play DTS encoded movies, as well as CDs.*

### Illuminated Remote

*Allows you to operate your machine without sacrificing the dark, movie theater experience.*

### Parental Controls

*Parents can control their children's access to the system or to aspects of the system.*

### Shuttle Control

*Allows you to control features such as still frame, quick fast-forwarding and slow motion from your remote control.*

**Spend more than \$499 on a DVD player and get \$50 off a purchase from DVDExpress.com.**

**Spend under \$499 on one of our DVD players and receive a \$25 discount off your purchase.**

## And now for the techno stuff

### HiFi Stereo Sound

Delivers true high fidelity sound comparable to CD quality sound. Captures superior sound when playing back a rented movie or recording off the air from cable. You must have a VCR with HiFi stereo sound in order to get surround sound.

### Jog Shuttle Dial

A round dial that enables you to quickly fast forward and rewind or glide through programs frame by frame. This is a great feature to have if you do a lot of editing.

### VCR+

A feature that lets you enter a simple code found in every TV listing that instantly programs your VCR for you. VCR+ with cable box control will perform this with cable by automatically changing the cable box channel for you when it's time to record.

### Front Panel Inputs

These inputs allow for easy hook-up of a camcorder or other video sources to your VCR.

### Universal Remote Control

An easy-to-use, pre-programmed remote that operate most brands of TVs and cable boxes.

### Flying Erase Head

These are special tape heads that allow for "glitch free" editing. There are no fuzzy spots in between start and stop points on your tape.

### Digital Tracking

Automatically adjusts the tracking for you so that you always get a clear, sharp picture.

### Auto Clock Set

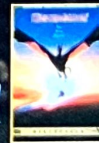

A feature that sets the clock on your VCR automatically.

### Super VHS

A top-of-the-line format that delivers a picture that's got almost twice as much detail as a standard VCR. This is a must if you own a Digital Satellite Dish - you'll get the best recording quality possible from it.

### Auto Daylight Savings Time

Automatically moves your VCR's clock to Daylight Savings and back again to Standard Time.

DragonHeart is available on video cassette and DVD.

## Understanding surround sound doesn't require a Master's degree in home theater.

### ALL YOU NEED IS A SIMPLE PRIMER ON THE BRILLIANCE OF DOLBY® DIGITAL

— the driving force that brings both movies and music to life. Dolby Digital was first brought to moviegoers' attention in 1992 with the release of *Batman Returns*. It lent excitement and realism to this mega hit and changed how we listen to movies.

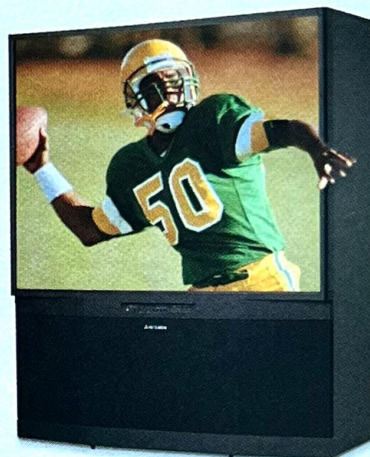

Back in the 70s, Dolby Stereo was introduced bringing four-channel sound to movie theaters. Three channels of sound were used in the front (left and right for music and effects, and center for dialog), while a rear surround channel created effects and atmospheres. Then came Dolby Surround and Dolby Pro Logic home theater systems which allowed viewers to recreate the same four-channel theater set up at home through the placement of five distinct speakers. Although five speakers were used, the system was only four channels because the rear speakers were monaural (as opposed to stereo) and operated as a single channel.

**AND NOW THERE'S DOLBY DIGITAL 5.1** — an advanced form of digital audio coding that gives you six channels of amazingly precise digital surround sound that mimics human hearing. The left, center and right channels in front give you clear dialog. Separate (also known as discrete) left and right surround channels in the rear provide atmospheric and ambient

sounds. A subwoofer/ bass effects channel (the .1 in the number) delivers extra punch to action and special effect scenes.

Dolby Digital 5.1 is sometimes referred to as AC-3. AC-3 is Dolby's third generation of an audio coding algorithm. This AC-3 encoder takes maximum advantage of human auditory masking (stay with me here)

by dividing the audio of each channel into narrow frequency bands of various sizes. These are then optimized for human hearing.

In the process interference is drastically reduced for pure, lifelike sound.

So enough of the technical mumbo jumbo. What can Dolby Digital do for you? Well, if you like realistic sound, **if you want to feel your movies** in addition to hearing them and

if you want the best sound reproduction to date, then you've gotta have Dolby Digital. Action films have more adventure. Suspense films are more shocking.

### SPORTS PROGRAMMING IS MORE REALISTIC

Dolby Digital 5.1 gives you crisp, clear and incredibly natural dialog. Space is limitless as sound bounces across the room from every direction. Background hiss and interference disappear as thunderous bass and delicate whispers are distinctly heard.

### AND THE FACT OF THE MATTER IS DOLBY DIGITAL IS BECOMING INCREASINGLY HARDER TO AVOID.

Movies encoded with Dolby Digital carry a specific seal on the packaging to notify consumers. Dolby Digital is a "mandatory" audio coding format for DVD, meaning that Dolby Digital soundtracks are on every disc. The ATSC has selected Dolby Digital 5.1 as the sound of choice for the new Digital Television format. While not all

programming will use the 5.1 format, it's a safe bet that movies where surround sound is important will carry the 5.1 audio. Even digital cable and DIRECTV transmissions will now carry Dolby Digital for their broadcasts.

Today there are many easy to set up, easy to use and easy on the wallet pre-packaged Dolby Digital surround sound systems. Manufacturers use their engineering expertise to ensure that the entire system is sonically balanced to produce the best possible sound.

Armageddon and Golden Eye are available on DVD.

## And now for the techno stuff

### Dolby Pro Logic® Surround Sound

The standard home version of movie theater surround sound. It utilizes five speakers – a pair of front speakers, a center speaker and a pair of rear surround speakers.

### Dolby® Digital

The latest technological advancement in surround sound, Dolby Digital is an entirely digital format which means that the information from the source must be digital (from a DVD player, laser disc player, or DIRECTV Satellite System). Dolby Digital has six independent channels of information: Two front speakers, two rear speakers, a center channel speaker and a separate subwoofer speaker. This allows sounds to move through the room diagonally instead of just from the front to the rear. Because it is a totally digital format, it sounds crisper and more lifelike.

### Dolby® Digital Ready

This is a term used to describe receivers that are capable of being upgraded to Dolby Digital. Some DVD (Digital Video Disc) players will have Dolby Digital processing built-in, so that all you have to do is hook them up to a Dolby Digital ready receiver to get Dolby Digital Surround Sound.

### Digital Theater Systems® (DTS)

DTS or Digital Theater Systems is the newest breed of surround sound that is meant for both music and movies. It also utilizes a five-channel format plus separate subwoofer output like Dolby Digital. But it delivers higher resolution sound: Up to 24-bit/96 kHz audio as opposed to the standard 16-bit/44.1 kHz found in most digital systems. Therefore each channel is audibly superior to other surround sound formats.

### Digital Signal Processing (DSP)

This sound processing enhances sound effects. It can be used for movie watching or music listening. Instead of watching a movie in "normal" surround sound, you could watch it in 70mm movie theater mode, which would create a very large and open feeling to the movie's soundtrack. Music can be enhanced by listening to it in different simulated acoustic environments such as a jazz club, concert hall or stadium.

### Subwoofer Output

Dedicated subwoofer output which sends pure bass information to a subwoofer. It is the best way to hook-up your powered subwoofer because it takes the strain of producing low bass notes off your receiver. The receiver then does a better job producing the middle and high notes.

### Audio & Video Inputs & Outputs

If you want to make your surround sound receiver the central controller for your audio and video entertainment system, then you'll need the appropriate number of inputs and outputs for connecting all of your equipment such as a TV, VCR, CD player, Digital Satellite Dish, tape player, etc.

### Digital Video Disc (DVD)

This CD-sized disc can hold most full length feature films on one side. Its picture quality is twice that of VHS with over 400 lines of resolution and CD quality sound. It's changing the face of home entertainment for ever.

### THX

This is a set of standards developed by Tomlinson Holman, George Lucas' chief audio engineer. A product that conforms to a THX specification tends to produce a high quality sound.

### Learning Remote Control

This remote can "learn" how to control all of your audio and video components and store them in one easy-to-use controller. Very good for getting rid of coffee table clutter.

## surround sound made simple

We packaged our best selling Surround Sound systems to fit many price ranges. All systems have been meticulously matched to give you optimum sound and value. Simply add a HiFi VCR or DVD player and transform your living room into a home theater.

### Boston Acoustics Dolby® Digital Surround Sound Package

**\$599.99**

COMPLETE SYSTEM (DT6000)

**Boston Acoustics**

Powered subwoofer with active equalized system amplifier

Five voice-matched satellite speakers

Dolby® Digital surround processor

Remote Control

The Boston DigitalTheater 6000 is an integrated Dolby® Digital 5.1 channel home theater sound system.

It accepts signals from digital or analog sources and decodes

them to produce surround sound for up to six channels. The power section uses

separate actively-equalized amplifiers for each of the six speakers, including the subwoofer. The front and rear satellites can be mounted on the wall, using the supplied wall mounting brackets, on a bookshelf or

table top. All speakers have magnetic shielding to prevent television picture interference. The pre-programmed universal remote control operates the DigitalTheater 6000 and 376 different models of TVs, VCRs and cable boxes. Just plug your DVD player or HiFi VCR and TV in for a complete Dolby® Digital home theater system.

**8 FREE DVD Rentals from NetFlix**

“Designed to blow away speaker systems built into most TVs, which it does handily... provides a quick and painless way to enjoy surround sound with a completely user-friendly system...fun to use and sounds darn good.”

– Stereo Review's Sound and Vision

### Boston Acoustics Complete Home Theater System • Available December •

**\$999.99**

COMPLETE SYSTEM (DT7000)

**Boston Acoustics**

Most people think a high end home theater means having to buy separate amps, receivers, speakers, subwoofers and lots of wire. This is not the case with the DigitalTheater® 7000. In one perfectly matched complete system, you get the latest Dolby® Digital decoding, 350 watts of bone chilling power and an impressive subwoofer containing a powerful 8-inch woofer. Three voice matched front speakers, each with a 3 1/2-inch midrange and 3/4-inch dome tweeter, deliver incredible detail. The two full range surround speakers put you right in the middle of the action. Connecting this system is incredibly easy because all of the wires and connections are color-coded. To top it off a convenient universal remote operates the DT7000 as well as your TV, DVD, VCR and cable box.

**Yamaha/Mirage  
Dolby® Digital  
Surround  
Sound Package**

**\$999.99**

COMPLETE PACKAGE (999P)

Complete system includes a Yamaha Dolby® Digital receiver and Mirage surround sound speakers including five speakers and a powered subwoofer. This is one of Yamaha's newest Dolby® Digital receivers. The receiver has three A/V inputs and four audio inputs, as well as two digital audio inputs. Delivers 70 watts x 5 channels. The four AVS-200 speakers measure only 7" x 4 1/8" x 5" (HWD) for easy placement. You can put the main speakers next to the TV since they are magnetically shielded. The center channel speaker gives smoother, more realistic dialogue. The powered subwoofer features an 8-inch woofer and built-in 100-watt amplifier.

"I couldn't stop analyzing, playing or marveling over the performance of such a small (speaker) package at such a great price."

**Boston Acoustics/  
Yamaha Dolby®  
Digital and DTS®  
Surround Sound  
Package**

**\$1,499.99**

COMPLETE PACKAGE  
(1499PB)

**Boston Acoustics**

This complete system features a Dolby® Digital receiver with five channels of discrete power amplification and six channel external input for other future super audio 5.1 formats. The receiver delivers 85 watts/channel x 5 for the front, center and surround speakers. Eleven Digital Sound Processing acoustic modes bring your music to a new level. The complete speaker package has a diminutive style that delivers exceptionally high performance from a package that virtually disappears in your living room. The front satellite speakers are made of die-cast aluminum for strength and resonant free performance. The subwoofer features a 75-watt amplifier that delivers extensive low frequency response. The satellites have a modern look, are video shielded (for placement on or near a TV) and come with wall brackets for easy mounting.

## Klipsch/Denon Dolby® Digital and DTS® Surround Sound Package

**\$2,799.99**

COMPLETE PACKAGE  
(2799PB)

**DENON**

This complete home theater package includes speakers from one of the best names in speaker manufacturing in the United States combined with one of Japan's finest audio manufactures. The main speakers are floorstanding and feature a Tractrix horn, a pure titanium diaphragm tweeter and dual 8-inch bass drivers. The center speaker is voice matched to give you clear dialogue and great transitions across your screen. The di-polar rear surrounds give a nice diffuse effect and the powered subwoofer gives you all of the bass you need with a 12-inch driver and built-in 440-watt peak-power output amplifier. The Denon receiver provides great decoding of your movie soundtracks, as well as plenty of power (85 watts x 5) for all of your speakers. The provided learning remote lets you control your entire system with one remote.

**8 FREE DVD Rentals from NetFlix**

## Boston Acoustics/ Yamaha Dolby® Digital and DTS® Surround Sound Package

**\$2,999.99**

COMPLETE PACKAGE  
(2999PB)

**Boston Acoustics**

This package combines our best selling Dolby® Digital receiver with our best selling surround sound speaker package. This complete system features a Dolby® Digital and DTS® receiver. It delivers equal output power — 100 watts x 5 for five channels — and a frequency response of 20-20,000 Hz. The receiver also features 17 cinema DSP and 5 HiFi DSP programs to recreate movie theater excitement and the immense size and sweeping grandeur of the best theaters. The home theater speaker package consists of five matched die cast aluminum satellites and a powerful 300-watt powered subwoofer with a Boston-built 12-inch DCD woofer. Comes with a learning remote that operates other components and can also store data for up to seven macro commands for everyday use with the touch of a button.

**DENON**

This complete home theater system is state-of-the-art in every way. The Klipsch speakers include floorstanding towers with built-in subwoofers for the front channels, a voice matched center channel for a perfect tonal match and di-polar surrounds for non-localized effects. The speakers use their Tractrix horns to reproduce the most subtle details in a movie soundtrack. The built-in 600-watt peak-power output amplifiers and 12-inch woofers provide you with thunderous bass for your favorite sci-fi thrillers. The Denon receiver gives you a powerful 100 watts x 5 channel amplifier and 32-Bit processing for both Dolby® Digital and DTS® soundtracks, as well as an eight-channel input for future applications. Two sets of speaker terminals for rear surrounds allow you to use the diffuse rear surrounds for movies and switch to the optional direct firing speakers for music listening.

“This system is almost perfect... it's perfect for those who demand style, who demand excellent music reproduction, and who favor an occasional guilty-pleasure romp with an action movie”

— Home Theater Magazine

**Denon/  
Sonus faber/  
Mirage Reference  
Surround Sound  
System**

**\$9,999.99**

COMPLETE PACKAGE (9999P)

**DENON**

**Sonus faber**

**Mirage**

Features our highest-quality components. Denon's flagship receiver is THX Ultra certified and boasts massive power output with 140 watts x 5 and a subwoofer output. Built-in Dolby® Digital and DTS® processors offer the latest in surround sound technology. The eight-channel external input is ready for future upgrades. Dual surround speaker capability (dipole or bipole speakers for movies and direct firing speakers for surround music) offer the highest performance for all types of listening preferences. The easy to use pre-programmed/learning remote allows you to control your entire system with one remote control. The Sonus faber five-speaker surround system is one of the most critically acclaimed in the world. It sports the Concerto Grand Piano main speakers, which pack a 7-inch woofer, silk dome tweeter and 7-inch passive radiator. The Solo center speaker is perfectly matched to the main speakers for effortless dialogue reproduction. The Concertino surround sound speakers sport a phase coherent design with a rear sloping front baffle that puts all the drivers on the same vertical line for the most accurate surround sound money can buy. The Mirage subwoofer features a 1500-watt class D amplifier for tremendous output with little distortion. A 10-inch powered woofer and a passive 10-inch woofer deliver thunderous bass. The ideal system for the person who demands perfection.

- 60 watts x 5 (20 Hz - 20 kHz @ 0.08 THD)
- Built-in Dolby® Digital decoder
- Digital signal processing

## Yamaha Dolby® Digital Surround Sound Receiver

**\$399.99**

(RXV495)

**YAMAHA**

- 70 watts x 5 @ 1 kHz 0.07% THD
- 11 DSP modes including Tri-Field Cinema
- Two digital inputs

## Sony Dolby® Digital Surround Sound Receiver

**\$499.99**

(STRDB830)

**SONY**

- 100 watts/channel x 5 (1kHz @ 0.8% THD)
- Dolby® Digital and DTS® decoding built-in
- 24 + 32-bit DSP processing
- Digital/Cinema Sound processing
- Three S-video in/2 S-video out

**10 FREE BLOCKBUSTER DVD RENTALS**

w/ purchase

## Pioneer Elite® Dolby® Digital Surround Sound Receiver

**\$549.99**

(VSX21)

**ELITE**

**PIONEER**

- 80 watts x 5 channels power output (20Hz - 20kHz @ 0.09% THD)
- Six-channel external input
- 4 digital inputs
- Pre-programmed remote control

## Sony Dolby® Digital Surround Sound Receiver

**\$599.99**

(STRDB930)

**SONY**

- 110 watts/channel x 5 (1 kHz @ 0.8 THD)
- Dolby® Digital and DTS® decoding built-in
- Digital/Cinema Sound processing
- Second room audio outputs with independent source

**10 FREE BLOCKBUSTER DVD RENTALS**

w/ purchase

## Denon Dolby® Digital Surround Sound Receiver

**\$599.99**

(AVR1800)

**DENON**

- 75 watts x 5 channels (20Hz - 20kHz @ 0.08%THD)
- Dolby® Digital and DTS® built-in
- Six-channel external input
- Preprogrammed universal remote control
- 96kHz, 24-bit D/A converters

## Yamaha Dolby® Digital Surround Sound Receiver

**\$599.99**

(RXV595A)

**YAMAHA**

- 85 watts x 5 (into 8 ohms at 1kHz, 0.07% THD)
- Dolby® Digital and DTS® built in
- Digital Sound Processing with 11 acoustic modes
- Universal remote control with preset codes for VCR, TV, etc.

## Yamaha Dolby® Digital Surround Sound Processor Integrated Amplifier

**\$2,299.99**

(DSPA1)

**YAMAHA**

- 110 watts/channel x 5 for front, center and rear surround speakers (20Hz-20kHz, 0.015% THD)
- 35 watts/channel x 2 for effect speakers (20Hz-20kHz, 0.05% THD)
- New user friendly learning remote control
- On-screen display
- Digital Sound Processing with 42 modes
- Built-in Dolby® Digital and DTS® decoder
- Seven-channel amplifier section

"I can say without hesitation that the Yamaha DSPA1 is the best conceived, most versatile and most complete controller/amplifier that I have discovered to date... If there is a road map to sonic satisfaction, this is it."

— Edward Foster, Audio Magazine, July 1998

## B&K Dolby® Digital Surround Sound Receiver

**\$2,798.00**

(AVR202)

**B&K**

- 105 watts/channel x 3 for front and center speakers (20Hz-20kHz, 0.05% THD)
- Remote control
- Massive capacitor power reserve for peak demands
- Factory upgradable for future digital formats
- 105 watts/channel x 2 for surround speakers (20Hz-20kHz, 0.05% THD)
- MOSFET designed amplifier
- Built-in Dolby® Digital and DTS® decoder
- Multi room/multi source capability

## Denon THX Dolby® Digital Surround Sound Receiver

**\$2,799.99**

(AVR5700)

**DENON**

- 140 watts x 5 with subwoofer output (20Hz-20kHz, 0.05% THD)
- Component video in/out
- Eight-channel external input for future upgrades
- Lucas Films THX Ultra certified
- Full learning remote control operates your entire system
- Multi-room/multi-source capability

"Excellent sound quality. Substantial power reserves. Easy to set up and use. Well designed remote control... The Denon AVR5700 is such a solid, quirk-free performer that it's going into our sound room reference system - one of the very few receivers to make it that far."

# a whole new generation

## **THERE WAS A TIME WHEN BUYING SPEAKERS MEANT TWO THINGS – A RIGHT AND A LEFT ONE.**

Get ready for the next generation of home theater. Today it's not just about listening to music. **Speakers take on a whole new role when movies enter the home entertainment mix.** If movies are as much a part of your amusement as music, surround sound is the way to go. Surround sound requires at least five speakers and a bass producing subwoofer to bring your movies and music to life. And since your speakers are the cornerstone of your entertainment system, it's important to know what to look for before you buy.

Most surround sound systems use a 5.1 channel array of speakers – a left, right and center channel in the front, two rear surround channels and a subwoofer. The subwoofer is the .1 part of the system since it is only used for low bass. Dialog comes from the center channel. The left and right are used for effects. The rears provide excellent background material.

**TO GET THE MOST FROM YOUR MUSIC,** be sure to be selective with your front left and right speakers. Floorstanding speakers are your best bet if space allows. The function of a speaker is to move air. A bigger driver in a larger enclosure moves more air.

However, if space in your home is at a premium, there are several excellent compact or bookshelf speakers that will give you the sound you want without the need for additional real estate.

Be sure to demo a wide range of floorstanding speakers to see what sounds best for you. (Refer to Techno Tips

for hints on test driving your next pair of speakers) **Individual preference is the most important component of speaker selection.**

Once you are happy with your front left and right speakers, it's time to decide on the rest of the system. Surround sound systems can be

purchased pre-packaged or as separate components. The prepackaged systems are selected to tonally balance with one another for optimal enjoyment. Of course, you can create your own system with a little knowledge and some help from your salesperson.

For a solid soundfield, the front and rear speakers should have identical tweeters (the part of your speaker responsible for the high frequencies) so that directional information is delivered in the same way and is tonally balanced. Generally, the easiest way to get identical tweeters is to buy from the same manufacturer thereby creating a one-brand system that is sonically balanced.

If you plan to use your surround sound system for the enjoyment of movies, you'll want to pay special attention to your subwoofer.

## **Cinematic excitement is created through the use of deep, thunderous bass.**

## **THINK OF DINOSAURS STOMPING THROUGH THE JUNGLES IN JURASSIC PARK**

or storm troopers roaring through outerspace in any of the Star Wars films. The sound comes from all angles and distorts the localization found in two-channel stereo.

**It's the bass that made you sit on the edge of your seat and caused your heart to pound wildly. And it's the bass that will make your system complete.**

Today you can get your bass from a dedicated subwoofer or you can choose front speakers with powered subwoofers built-in. Built-in powered subwoofers deliver a powerful, controlled, deep bass and are a good solution if you're tight on space. Built-in subs put far less pressure on your receiver or amp by requiring far less wattage, energizing only the passive midrange/treble section.

## JUST AS THE FUNCTION OF SPEAKERS HAS DRASTICALLY CHANGED, THE LOOK IS EQUALLY IMPRESSIVE.

*Floorstanding speakers are taller and thinner, with slim tower enclosures that house smaller drivers made of titanium and aluminum.*

**Mirage took a quantum leap forward in speaker design with their Omnipolar line.**

*The OM series uses an ultra-slim and shallow cabinet which houses two identical drivers. This unique design produces a wide dispersion into the listening environment with sound radiating 360 degrees in a spherical motion.*

The sound is open, spacious and absolutely believable wherever you stand in the room.

*Even small sound systems can live up to the expectations of big speakers with a new advancement in horn driver technology. Klipsch sets its horn in the front baffle to minimize diffraction and other unwanted sonic artifacts. The result is high output in a lively, crisp, efficient sound – no matter what the size of your speakers.*

## TODAY'S SPEAKERS ARE AS MUCH A MATTER OF AESTHETICS AS PERFORMANCE.

*Consumers expect their speakers to fuse into their living environment. In wall speakers, compact and bookshelf speakers fit into any room. And piano black lacquer finishes and exotic wood exteriors blend easily into any décor for a harmonious blend of form, function and feng shi.*

*Take time to audition speakers before you buy. It's hard to make a judgement on speakers you'll probably listen to every day in just a few minutes. Experiment with a number of speakers in your price range. Listening is the most important thing you can do, but you need to know what to listen to before you lay down the cash.*

*Follow these tips to ensure a sound decision:*

## And now for the techno stuff

- > **Bring a CD that you frequently listen to so you can recognize subtle differences among speakers.** Listen for a realistic, natural tone.
- > **Move around as you listen.** Find the sweet spot to determine how big the soundstage is. The soundstage lets you hear the placement of the musicians as if they were on a stage in front of you. You should be able to close your eyes and audibly see where each musician is in front of you. You should hear the movement as the saxophonist standing to the right wails on a long, lonely note or the bass guitarist takes center stage with a gut-wrenching riff. Listen for each individual instrument including from blaring horns to delicate cymbals. If low level detail is obscured, the speaker will lack clarity. Make sure movement is fast and clear.
- > **Listen for how the speakers sound** at very low volumes. If they are tinny or fuzzy, move on. Also, listen to each speaker to make sure that both sound alike.
- > **Match your speakers to your room.** Large speakers in a small room will be overpowering and lead to distortion. Bigger is not always better. Match your speakers to your other components. What good are powerful speakers that cannot be properly powered by your amplifier or receiver.

## boston acoustics surround sound packages

### Boston Acoustics Surround Sound Speaker Package

**\$999.99**

(SYS9000)

Complete Package

**Boston Acoustics**

*This very popular surround package features four front and rear speakers that are designed with a die-cast aluminum chassis for resonant free performance. The center channel uses the same tweeter found in the satellite speakers for a balanced tonal effect. The subwoofer is powered by a 75-watt amplifier for incredible bass performance. The system has a diminutive style that delivers exceptionally high performance from a package that virtually disappears in your living room. The satellites have a modern look, are video shielded (for placement on or near a TV) and come with wall brackets for easy mounting.*

### Boston Acoustics Surround Sound Speaker Package

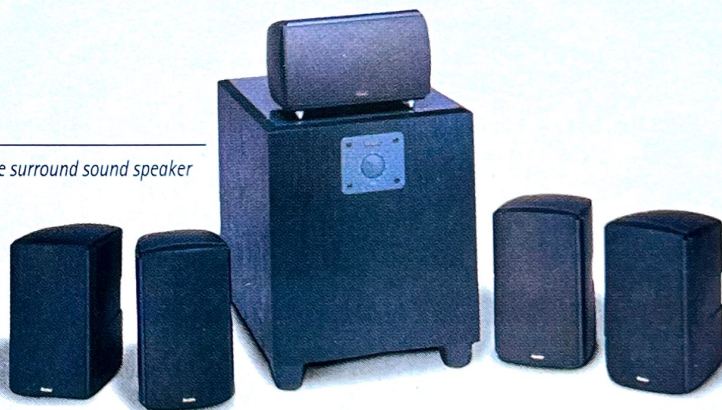

**\$2,199.99**

(SYS10K)

Complete Package

**Boston Acoustics**

*The Boston System 10K is a reference surround sound speaker package. Consists of five matched high-performance die-cast aluminum satellites and a 300-watt powered subwoofer with a Boston built 12" DCD woofer. The system delivers no-compromise, top-of-the-line performance with the placement ease of a subwoofer-satellite system.*

### Boston Acoustics VR Series Surround Sound Speaker Package

**\$2,799.99**

(VR950/VRSPRO/VR12/PV1000)

Complete Package

**Boston Acoustics**

*Complete system consisting of a sleek floorstanding speaker with surprisingly powerful, wide range sound. Dual 5 1/4-inch woofer delivers clean bass and high output while the 1-inch aluminum VR tweeter provides detailed, articulate highs. The high performance center channel speaker has a three-way design with Boston's unique vertically aligned midrange/tweeter. The 5 1/4-inch active/passive woofer, 3 1/4-inch sub-enclosed midrange and 1-inch aluminum VR tweeter complete this speaker. Also has a pair of easy-to-place dipole surround speakers that will envelop you with sound and a powered subwoofer with a massive 1000-watt amplifier. Turns any room into a home theater. Rated number one by a leading consumer magazine.*

## Sonus Faber Concertino

**\$998/pr.**

(CONCERTINO)

Genuine Walnut Finish

**\$1,198/pr.**

(CONCERTINO8)

Piano Black Lacquer Finish

**Sonus faber**

You won't believe your ears when you hear the dynamic sound produced by these speakers. Your eyes are in for a treat, too! Compact and simply beautiful, these speakers are ideal for easy placement in any décor. Whether you enjoy the poise and sophistication of classical music or the pulse pounding excitement of rock, the rich tonal balance that the Concertino speakers produce makes them the perfect choice.

“The Concertinos present the human voice with a naturalness and clarity that will flat-out shock.”

– Home Theater Magazine

## Sonus Faber Concerto

**\$1,895/pr.**

(CONCERTO)

Walnut Finish

**\$2,098/pr.**

(CONCERTO8)

Piano Black Lacquer Finish

**Sonus faber**

Power blended with grace. This speaker has been conceived for the most discerning of music lovers. Full bodied, it possesses an effortless ability to catch and hold onto even the grandest dynamic passages. Its subtle inner voicing allow it to recreate acoustic scenes endowed with evocative value. Its price may be moderate, but the Concerto's build quality is up to Sonus faber's usual high standard, with 1-inch thick sculpted slabs of hand rubbed walnut for the side panels. The rest is covered in a fine-grained leatherette. On the back are two sets of bi-wire gold plated binding posts that can be linked for single-wire connection. The narrow, well-packed baffle carries a 7-inch frame bass/mid driver, a 3/4-inch soft-fabric dome tweeter, and a 2-inch diameter bass reflex port. The speakers are supplied in mirror-image pairs, the tweeter mounted above the woofer and to the side of the port. Simply put, affordable excellence.

“Loudspeaker Design of the Year 1997”

– The Academy for the Advancement of High End Audio, an award given by industry designers

## Sonus faber Grand Piano Loudspeakers

**\$3,495/pr.**

(GRAND PIANO)

Also available in genuine walnut

**Sonus faber**

Performance and class packaged into a luxurious, handcrafted, floor standing speaker. The silk-dome tweeters, powerful bass drivers and first-order crossovers combine to bring you true listening euphoria. The 7-inch driver is fitted with a concave brass phase plug for added stiffness to the cone and optimal high-frequency dispersion. Amazing dynamic range and imaging capabilities. Piano black lacquer finish.

“The Sonus Faber Grand Piano is a distinctively styled loudspeaker...the real magic comes when you listen. This is among the more musically satisfying speakers I've heard at any price - with an outstanding combination of strengths...an outstanding value.”

– Stereophile Magazine

## mirage surround sound speaker packages

### Mirage Surround Sound Speaker Package

**\$799.99**

(AVS500/FRXS8)

Complete Package

Complete speaker system includes four small but powerful front and rear speakers, a compact center channel speaker that produces clear, accurate sound, along with a powered subwoofer with an 8-inch woofer and 100-watt amplifier for deep, thunderous bass. This system is so compact that it virtually disappears from view, so you get incredible surround sound without big, unsightly speakers.

“I couldn't stop analyzing, playing or marveling over the performance of such a small (speaker) package at such a great price.”

– Tom Nounsaine, Video Magazine

### Mirage Omnipolar® Surround Sound Speaker Package

**\$1,999.99**

(OM10/FRXS15/OMC3/OMR2)

Complete Package

This complete package includes a pair of Omnipolar® floorstanding front speakers, a matching center channel speaker and a pair of rear effect speakers. Omnipolar® design radiates 360° sound for an unrivaled soundstage. The front floorstanding speakers feature two 1-inch dome tweeters and two 6 1/2-inch midrange drivers for clear highs and solid bass response. The wall mountable rear speakers feature two 1-inch dome tweeters and one 6 1/2-inch midrange for realistic surround effects. And the magnetically shielded, two way center channel speaker uses one 1-inch dome tweeter and two 5 1/2-inch midrange drivers for great dynamics and on-screen dialogue placement. Add the 300-watt powered subwoofer with a 15-inch driver and you get thunderous bass. This surround sound speaker package is made for serious home theater!

## klipsch surround sound speaker packages

### Klipsch Surround Sound Speaker Package

**\$849.99**

(Quintet/KSW10)

Complete Package

*This revolutionary new system gives you the quality of Klipsch in a new, compact size. The Klipsch Quintet Micro Theater System is the smallest speaker system in the company's history, consisting of four voice-matched horn loaded satellites measuring just 7-inches high. The speaker package also includes a sonically matched, dedicated center channel and a 55-watt, 10-inch powered subwoofer. The 90° x 40° MicroTractrix Horn is integrated into the front baffle to minimize diffraction. The speakers provide superior damping characteristics and neutralize unwanted resonance. A superb system for the discerning ear.*

### Klipsch Synergy Reference Surround Sound Speaker Package

**\$1,999.99**

(RF3/RC3/RS3/KSW12)

Complete Package

*This is an incredible speaker package. Featuring the RF-3 floorstanding speakers for your two front mains. They deliver a crisp, distinctive Klipsch sound from the 6 1/2-inch Tractrix horns as well as plenty of tight bass from the dual 8-inch woofers. The center speaker is perfectly voice matched so transitions in movies will be seamless. Di-polar rear surrounds produce a diffuse sound, filling the entire room with music or effects. Add the 105-watt powered subwoofer with a 12-inch woofer and you have thunderous bass. The movies will seem to be taking place in your living room.*

# the sennheiser sound difference

Watch TV while others sleep. Enjoy music at your own volume — no matter how earth shattering that might be. Sennheiser, an Emmy Award winning company, has brought us such innovations as wireless microphones for musicians and the world's first wireless infrared headphones. Innovations like these have revolutionized the way singers perform. Sennheiser technologies grant total freedom to move around and has changed the way performers dazzle us on stage and the way we listen to music forever. Through constant development Sennheiser continues to bring sound to life with the most cutting edge technology in headphones today.

## Fill every room in your house with movies, sports and a whole lot more

### DIRECTV IS ALL ABOUT OPTIONS THAT'S THE POWER OF DIRECTV®.

Just picture it – over 210 channels at the push of a button. But it's not just about different channels.

What about different channels in different rooms? Add a dual LNB and extend DIRECTV's reach to another room. Add a multiplexer and enjoy the power of DIRECTV® throughout your entire house. And the best part of all? No more cable company hassles and their ever-increasing rates.

When we decided to become an exclusive DIRECTV dealer, we knew we were dealing with quality. In fact, DIRECTV is the only satellite company that we recommend to our customers.

The reason? They offer more. More movies, more sports and more pay per view than cable or any other satellite company.

### BRING DIRECTV HOME AND OPEN UP TO A WORLD OF CHOICES.

Just buy any DIRECTV™ System and subscribe to DIRECTV Total Choice® programming and receive free for two months 32 premium movie channels including HBO®, Starz!® and Showtime®

professional installation for **\$99.99** or free self install kit

get a second receiver for just **\$99.99**

**Williston Audio Labs**  
Not for Resale

### LOCAL TO LOCAL

#### HOW DO I GET MY LOCAL PROGRAMS WHEN I SUBSCRIBE TO DIRECTV?

Well, currently there are several options. For most of us we can either use a set top or roof mount antenna. This allows you to watch network programming, including your local news and weather. The other option is to keep a minimal subscription to your cable service that would include the major networks and your local PBS station.

Can I ever receive local programming via my DIRECTV satellite?

In the near future, new larger dishes with special converter boxes will become available which will allow you to receive the major networks via your DIRECTV satellite dish. You may or may not need to upgrade, depending on your geographic location. Initially the service will be available in only the major markets including Boston, Atlanta, Philadelphia and Dallas.

### HDTV

HDTV is here and it's here to stay. Soon you will be able to receive the full HD signal via your DIRECTV satellite system. DTV televisions have been available for quite some time and now the satellite systems are available. You may want to consider an HD satellite system even if your TV is not HD capable. This way you will be ready when you upgrade your set.

Watch the NFL games that you want to watch with DIRECTV®. No more suffering through the Packers or the Niners when you need to be watching the Browns. You'll get as many as **13 GAMES EVERY SUNDAY OF THE REGULAR SEASON.**

Offer may not be valid in the limited areas served by the members or affiliates of the National Rural Telecommunications Cooperative. Limited-time offer for new residential subscribers who purchase any DIRECTV System from a participating retailer between 11/4/99 and 1/16/00, and subscribe to DIRECTV Total Choice programming (\$29.99/mo.) by 1/28/00. Customer must accept offer at activation to receive the free programming. Offer void where prohibited. Programming, pricing, terms and conditions subject to change. Hardware and programming sold separately. Taxes not included. DIRECTV programming is provided in accordance with the terms and conditions of the DIRECTV Customer Agreement, a copy of which is provided with your first DIRECTV billing statement. DIRECTV, Total Choice and "It's Like Having a Movie Theatre in Your Home." are trademarks of DIRECTV, Inc., a unit of Hughes Electronics Corp. All other trademarks and service marks are the property of their respective owners.

Audiophile sound and performance from a company you know and trust. Sony integrates Dolby® Digital, DTS® and their Digital Cinema Sound into this high performance A/V preamplifier. Using a 32-Bit DSP processor for Digital Cinema Sound you can recreate the subtle characteristics of three of Sony's very own professional theaters. Virtual Theater settings let you experience the same effects with only two speakers. Five digital inputs allow for simple system integration and the Control A1 cables let you control other compatible Sony components.

“Behind its handsome and mild mannered exterior, the Sony TAE9000ES is simply seething with digital activity...Rarely do I measure (or hear) such clean performance from an A/V component...Equally tantalizing was the preamp's really cool backlit touch-screen remote control.”

— Stereo Review

**Go ahead. Talk to your equipment. Your remote will answer back.**

This remarkable two-way touchscreen remote control not only sends commands to your equipment, it actually receives status information and text data back. One quick look at the remote's LCD panel will tell you operating status, CD titles and text, plus more. And the remote controls DIRECTV guides and DVD menus as well. Wow – all that power in the palm of your hand!

This component is designed for audiophile sound in music reproduction, as well as high-end performance for home theater surround sound. The ultra high current amplifier delivers 120 watts to all five channels. The flexible six-mode operation means you can get the most out of the amplifier no matter what kind of system you are designing, two-channel stereo or surround sound. This is a perfect match with the Sony ES pre-amplifier shown above.

## Changing the meaning of Pure Audio

### Introducing the world's first Super Audio CD Players

The compact disc was a revolutionary development that overturned conventional thinking about audio media. The CD system converted music signals into digital signals for recording and playback. Users were amazed by the dramatic improvements in sound quality, the quick access and the handling convenience.

SUPER AUDIO CD

One of the limitations, however, of the CD is that the playback frequency range and dynamic range represents just one small portion of the sounds which exist in nature. With the continuous advances made in digital technology, engineers have been experimenting with making recordings that contain a greater volume of information, allowing for amazing sound quality. This research led to the creation of a format with even higher sound quality than the CD – the Super Audio CD developed by Sony and Phillips.

The Super Audio CD relies on a Direct Stream Digital (DSD) recording format. This format gives listeners music reproduction that is remarkably pure and faithful to the original. DSD also accommodates more than four times the information of the current CD format. Super Audio CD is destined to become a new source media for the next century.

**Sony  
Super Audio  
CD Player**

**\$4,999.<sup>99</sup>**

(SCD1)

**SONY**

**N • E • W**

Get ready to be impressed. Just turn this component on and you'll hear its clarity. Take one look at its sleek styling and you'll see its beauty. The SCD1 automatically determines if the loaded disc is Super Audio CD or conventional CD, and then begins playback accordingly. This is possible thanks to the twin pickup system, which incorporates two independent optical systems for Super Audio and CD. The built-in Direct Stream Digital decoder reads the digital data and forms it into 1-bit DSD data for unbelievable clarity and pure sound. Not a detail was missed on this piece of equipment. The eccentric insulator foot is an off center type that offers pin point contact and eliminates resonance or muddled sound in the mid to high range. It also reproduces heavy bass sounds with no vibration. The disc housing, where the disc spins is treated with an anti-vibration coating. The contact point for the sliding mechanism is made of a high carbon textile with a Teflon coating to ensure sound insulation and high reliability. The SCD1 is beautifully styled in an aluminum top-plate for a sleek, futuristic look that will be the perfect compliment to any audiophile's system.

"Sound to die for. Stunning fit and finish. Engineering marvel... the SCD-1 is a high-tech retro component designed to provide ultra-high quality two-channel playback. In its wild extravagance, it succeeds wildly."

**Sony  
Super Audio  
CD Player**

**\$3,499.<sup>99</sup>**

(SCD77ES)

**SONY**

**N • E • W**

Simply stated – wow! This is one piece of equipment you'll want to come in and hear. Listen to Super Audio CDs and standard CDs as you've never heard them before thanks to the twin optical pickup mechanism and built-in Direct Stream Digital decoder. The slide top loading panel moves horizontally to keep the guide rails completely concealed. The motorized cover and floating mechanism are insulated against noise and vibration. Just like conventional CD Text, the Super Audio CD displays disc title, artist name and track title for CD and Super Audio CD. Apart from the track and time display, there is a 15-character dot matrix message display area. The display window is made of a thick acrylic material with beveled edges. The whole unit is encased in black housing to blend easily with other components in your home theater system.

## Bose Lifestyle® 12 Series II Home Theater System

**\$1,999.99**

(LS12II)

**BOSE**

This ultra-compact Bose home theater system delivers big, exciting surround sound from a Virtually Invisible™ speaker system consisting of five small front, rear and center channel cube speakers. The real thrill of this system comes from the Videostage® five circuitry, which gives you five-channel surround sound from any source. The system features Bose's Lifestyle music center with AM/FM tuner and CD player. Also comes with the patented Acoustimass® bass module for deep, natural bass and an easy-to-use radio frequency remote control that works from anywhere in the house, even through walls and around corners. Optional brackets are available to mount the cubes on the wall or ceiling.

Buy a Lifestyle™ System and get a FREE Bose Wave™ radio

Use the Wave radio by itself or to bring the sound of your Lifestyle system into a second room. Offer valid with purchases of LS12II, LS25II or LS30II between 11/11/99 and 1/9/2000 (a \$349 value). See store for details.

Home Theater  
System**

**\$2,499.99**

(LS25II)

**BOSE**

The criteria Bose used for designing this home theater system centered around one thing: you. The result is sound reproduction so versatile that music, movies and TV programs all seem to come alive. It's made possible by an advanced technology known as Videostage™ five circuitry. This revolutionary advancement gives you surround sound from any source – even mono sources. The hideaway Acoustimass® module delivers punch with deep, resonant bass and no audible distortion. There's even 2-zone

expansion capability to let you play different audio sources in two rooms of your home simultaneously. As for style, the system comes with a sleek, music center featuring the world's smallest 6-disc changer and Virtually Invisible® palm sized speakers. All of which blend in and complement just about any décor. Stop by soon for a demonstration. We think you'll be extremely impressed by what you hear.

Lifestyle® 30  
Series II Home  
Theater System**

**\$2,999.99**

(LS30II)

**BOSE**

The Lifestyle® 30 Home Theater System criteria represents an elegant break from conventional technology. The tiny Jewel Cube™ speakers are smaller than you ever thought possible – particularly when you hear the big sound they produce. The proprietary Videostage™ five circuitry delivers surround sound from any source including traditionally recorded mono and stereo soundtracks. The hideaway Acoustimass® module delivers bass with no audible distortion. A slim, contemporary music center replaces racks of electronics. There's

even a 6-disc CD changer. Operation is simple – just watch a movie or listen to a CD. Patented Bose technologies automatically ensure the proper bass level and natural, lifelike sound. Control is at your fingertips with a simple remote control that works even outside the room. Finally, a home theater system that brings you more of the experience, not more equipment.

# STEREO 2-CHANNEL AUDIO

## Sony Stereo Receiver

**\$149.99**

(STRDE135)

**SONY**

- 100 watts x 2 power output
- Discrete output transistors
- Sony UniCommander® remote control

## Yamaha Stereo Receiver

**\$249.99**

(RX396)

**YAMAHA**

- 50 watts x 2 power output (into 8ohms, 20Hz to 20,000Hz, 0.04% THD)
- Full function remote control
- Variable loudness control
- 40 radio station presets
- Sleep timer

## Denon Stereo Receiver

**\$249.99**

(DRA275R)

**DENON**

- 40 watts/channel (8ohms, 20Hz to 20,000Hz, 0.05% THD)
- 40 radio station presets
- Five audio/video inputs
- A/B speaker selector
- Remote control

## Denon Stereo Receiver

**\$299.99**

(DRA375RD)

**DENON**

- 60 watts/channel (into 8ohms, 20Hz to 20,000Hz, 0.05% THD)
- Six audio/video inputs
- 40 radio station presets
- Radio Data System tuning will display call letters, song titles etc.
- Remote control
- A/B speaker selector

## Yamaha Stereo Receiver

**\$299.99**

(RX496)

**YAMAHA**

- 75 watts x 2 power output (into 8ohms, 20Hz to 20,000Hz, 0.04% THD)
- Full function remote control
- Pure direct switch
- Variable loudness control
- Sleep timer

## Yamaha Stereo Receiver

**\$399.99**

(RX596)

**YAMAHA**

- 80 watts x 2 power output (into 8ohms, 20Hz to 20,000Hz, 0.04% THD)
- Top art design for great sound
- Six audio/video inputs
- Infrared input/output ports for custom installation use

## Denon Stereo Receiver

**\$699.99**

(DRA-775RD)

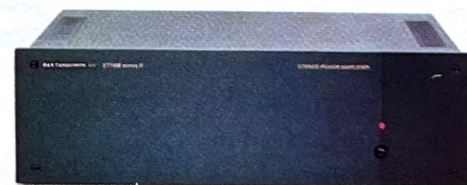

**DENON**

- 90 watts/channel (into 8ohms, 20Hz to 20,000Hz, 0.05% THD)
- Multi-room capability
- Radio Data System tuning will display call letters, song titles etc.
- Includes second remote for operation in second room
- Low-impedance speaker drive capability
- Pre-out terminals allow amplifier upgrade

## B & K Stereo Amplifier

**B&K**

- 125 watts x 2 (8ohms, 20Hz to 20,000Hz, 0.05% THD)
- High Current Capability for reproducing source material
- Toroidal Transformers provide high current for superior dynamics
- Class A Pre-Driver improves low-level detail for smoother, more musical sound
- Gold Plated Connectors minimize signal loss and degradation
- Balanced Inputs minimize noise between pre-amp and power amp

## B & K Stereo Pre-Amp Tuner

# Your music just got better

*Close your eyes and imagine that your favorite CD is even better. The music sounds crisper, clearer, warmer. You feel as if you are being swept around the stage or throughout the orchestra pit. The string section fades as you move towards the percussion. And you feel as if you are there.*

*When the CD was introduced a few years back, there were a lot of people that were skeptical. They felt that, on a CD, their music would lose some of the warmth, depth and detail that they were experiencing with vinyl. But, with the introduction of DVD audio and 1,200 times the space of the conventional CD, everybody can be satisfied.*

*By this holiday season, DVD audio software will be available from major recording labels and DVD audio will be launched. It will open up a whole new platform for the music and software industries. Recording engineers will have the freedom to interpret how the music should be presented to you. Where should you be in relation to the music? In the front? In the back? Near the strings? Near the brass? They will have the opportunity to decide what visual effect will be used to compliment the music. Will it be a series of music videos? Will it be an elaborate production? Will it be an unrelated scene that plays off the music? Or will it be simple on-screen text?*

*Whatever the case, DVD audio is surpassing every standard set in the music industry. And the only way to hear it and see it is to get equipped. There is no longer room for skepticism. Not even for the most devout audiophile.*

## Panasonic DVD Audio/Video Player

**\$799.99**

(DVDA7)

**Panasonic**

*With an audio-only position, designed to block out electronic noise and pinpoint the pure hi-fi sound, true music lovers need this system. The sound is complimented with a 10-bit Video D/A Converter for true picture quality. Not to mention, Cinema Mode for movie-theater picture quality.*

(FS7000)

**JVC**

- Digital tuner with 15 FM and AM station memory
- Real cherrywood enclosure speakers
- CD player with 1-bit D/A converter
- Three-mode volume gain control to improve sound quality and adjust level in fine steps during low level listening

## Denon Pure HiFi Audio System

**\$449.99**

(DM3S)

Also available with 3-disc CD changer

**\$599.99**

(DM5S)

**DENON**

- AM/FM stereo receiver with CD player
- 40-watt total power output
- Additional inputs and outputs
- Mission MS-5 loudspeakers with two way, two speaker Bass Reflex System
- Infrared remote

"The DM3 Denon/Mission system sets a new minimum price point for a high end system. This level of mid-range realism, bass reproduction, sound staging, and dynamics has a right to cost more than \$450 for the complete system, but it doesn't."

— Stereophile Magazine

## sanus speaker stands

*Euro Foundations from Sanus are a contemporary alternative to the utilitarian look of most steel loudspeaker supports. They are quiet and rigid, with a look that matches modern loudspeakers. Available in 14-inch, 24-inch, 30-inch and fully adjustable heights. Top plates are low profile and feature triangular isolation pads. The base may be filled with sand or shot to increase mass. Adjustable floor spikes are provided to ensure stability and minimize resonance. The black powder finish is durable and attractive. Euro Foundations offer performance with style that will enhance any system.*

**SanusSystems**

### 14" Sanus Speaker Stands

**\$79.99**

(EF14II)

Also available 24"

(EF24II)

## A seven letter word takes over the camcorder industry forever. Digital.

### DIGITAL IS INVADING AUDIO/VIDEO IN A BIG WAY AND ATTRACTING A LOT OF FANS IN THE PROCESS.

Forget about the battle over Beta vs. VHS or 8mm vs. Super VHS. Camcorders are going digital and blowing the zoom lenses off their predecessors. Digital camcorders (sometimes known as Mini DV) have the highest quality format to date producing images that are far more precise with sharper color and greater detail.

Digital image quality is twice that of a standard camcorder and 25 percent more vibrant than Super VHS or Hi8 models. Mini DVs produce images with up to 500 lines of resolution. Super VHS and Hi8 give you 400 lines and 8mm and VHS give you 240 to 270 lines of resolution.

Digital camcorders also produce lifelike sound with a choice of either a CD quality 16-bit stereo soundtrack and/or two 12-bit stereo soundtracks. Sixteen-bit recording gives you the highest quality audio recording. The portion of the tape dedicated to sound is filled with as much audio information as possible creating realistic sound. Twelve-bit recording lets you record as you normally would and then lets you add a separate soundtrack such as background, narration or sound effects later.

*The Mini DV tape format is no bigger than a matchbook and holds up to 60 or 90 minutes of video.*

The digital signal can be copied to other digital devices such as a high definition television with absolutely no loss in image quality. Like 8mm camcorders, Mini DVs are not compatible with today's VCR but can easily be connected to the television for playback or dubbing.

### Another new digital format is the downwards compatible Digital 8 camcorder. Electronic manufacturers are keenly aware

of how their buying audience feels about equipment obsolescence.

Nothing angers a consumer more than to buy a camcorder for Junior's birth only to find it outdated by Junior's first birthday party. Because it is downwards compatible, Digital 8 has the same benefits of the Mini DV, but can also accept existing 8mm (including Hi8) analog tapes. Digital 8 is slightly larger than the Mini DV to accommodate the bigger tape size and its picture is slightly inferior to the Mini DV.

Digital camcorders can also double as still cameras. It's easy to pull still photos from your camcorder and download them to your computer to create personal web pages, email photos to family members or create personalized greeting cards and photo albums. To keep both still images and full video in their pure digital format when hooking up to a computer, many digital camcorders come with an IEEE 1394 output connector. This connector (also known as iLine or firewire) allows you to edit and manipulate digital stills and/or digital video with extreme accuracy and no loss in image quality.

Digital gives you greater directorial control over playback and editing capabilities. **Editing can be done with pinpoint accuracy.** Many of the new digital models allow you to create customized titles without altering the images on the tape. Titles can be added or deleted after recording. This feature also makes it easier to search for specific scenes based on titles. Another feature of digital camcorders is the ability to capture a small amount of audio to go along with your still photo narration.

### OH, THE FUN YOU'LL HAVE.

All of this technology packaged into a compact, stylish and amazingly lightweight design! And the real beauty of digital camcorders is that you don't have to have a name like Fellini to create spectacular videos. Chalk another one up to digital technology.

## And now for the techno stuff

### Mini DV

These camcorders are typically the smallest (using a tape 1/2 the size of a standard 8mm tape) and have the best picture quality and CD quality sound.

### Digital 8

A digital camcorder that is downwards compatible to accept 8mm tapes in addition to digital recording.

### Digital Zoom

This feature digitally enhances an image that is at an optical zoom higher than 12 to 1. With a digital zoom there is no lessening in picture quality (up to 24:1).

### IEEE 1394

Also known as firewire. Provides a high speed, bi-directional digital link between camcorders, a camcorder and editing deck, or a camcorder and computer.

### Memory Stick

The new industry standard for storage and transfer media. Allows you to transfer information such as data, text and graphics from a digital camcorder to another camcorder or computer. Contains 11 times the storage capacity of a floppy disc and is smaller than a piece of chewing gum.

### Image Stabilization

This feature keeps your video from getting the "jitters" when you're not using a tripod.

### Zoom

A higher zoom power means that you can get in close for a "tighter" shot.

### Shutter Speed

If you like to shoot action or sporting events, then you need a camcorder with a high shutter speed. It allows for clear slow motion on freeze frame action scenes.

### HiFi Stereo Sound

If you plan on recording concerts or plays, where sound is critical, then you definitely need a camcorder with HiFi stereo sound.

### Flying Erase Heads

These are special tape heads that allow for "glitch-free" editing. There are no fuzzy spots in between start and stop points on your tape.

### Built-in Light

This device is like having a flash on your camcorder. It helps to make sure that you can record even in tough lighting situations.

### Color Viewfinder

This feature allows you to really see what your shot will look like as you're shooting it.

### LCD Screen

This is a small TV screen that usually "flips-out" from the camcorder so that you can see what you're recording on a larger scale rather than in just a small viewfinder. LCD screens can also be used to instantly playback the tape that you just recorded, so that your friends can watch along. LCD screens generally come in sizes from 2 1/2 inches to 4 inches. Some even come with built-in speakers so that you can hear the instant playback of your video.

### Digital Effects

This feature allows you to change the look of what you're recording. You can shoot in black and white, mosaic, variable fade in and out, sepia tones, tilting and much more.

### Hi8

Improved definition to give you better than 8mm or VHS quality shots.

### Digital Recording

Your videos will have more precise detail and accurate recording with up to 560 lines of horizontal resolution.

### NightShot

A feature on Sony camcorders that utilizes infrared technology to let you shoot in total darkness.

### LaserLink

A system that uses infrared technology to allow you to hook up selected Sony camcorders to your TV without any wires.

### Auto Date Entry

This device will automatically record today's date on the tape. No more age guessing!

### Manual Backlight Control

This feature allows you to take great pictures even if the subject is in front of a bright light such as a window.

8 MM

**Sony 8mm HandyCam®**

## the tamrac difference

What's the Tamrac difference. Simply put, it's the materials and workmanship. Tamrac relies on the finest, weather and tear resistant materials. All Tamrac camera bags are protected with thick closed cell foam for the very best shock and vibration protection. Tamrac's innovative Windowpane-Mesh window combines vinyl and nylon mesh for film and accessory pockets. Zippers are made of high quality self healing nylon coil for unbelievable grip closing. Hardware is selected based on its application and is built to perform over and over again. No matter what your carrying needs, Tamrac builds it to last.

**Tamrac  
Photo  
Explorer 1**

**\$39.99**

(5201)

- Internal divider is great for carrying camcorder and accessories

## ROUTE 66? A DAY IN VERMONT. A WEEKEND IN THE CAROLINAS.

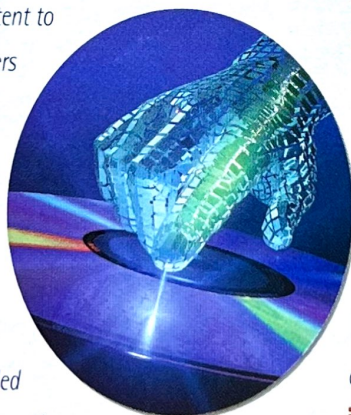

IF YOU LIKE MUSIC, you've probably put a lot of effort into creating the perfect home audio system. But how often are you actually home to really enjoy it? You're constantly jumping in and out of your car, running one place or another. It seems you spend more and more time on the road.

So why not make your mobile system sound as good as your home system? It's easy to do and won't cost you a half a year's worth of car payments. Start with one simple addition that will have you singing on your way to work – a CD player.

### The CD player

Since the birth of the CD in 1982, its popularity has steadily risen. In 1991 the sale of CDs and cassettes ran pretty even. A year later the shift was on. CDs were leading with 46.5 percent of sales. Today the leading source of pre-recorded music is compact disc. And now **recordable CDs**

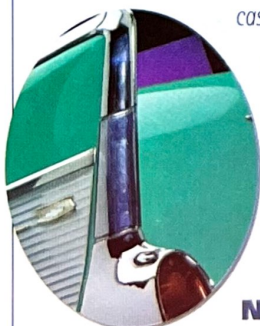

**have entered the mix.** Not content to rest on its laurels, car CD player manufacturers are playing up to their ever growing popularity. There are now **in-dash CD players that hold up to 6-discs at a time.** If you already have a CD player maybe it's time to upgrade to a CD Changer. CD changers that hold up to 12 discs can easily be installed in the trunk of your car. Or you can chain several changers together to

### STORE A VIRTUAL LIBRARY IN YOUR CAR.

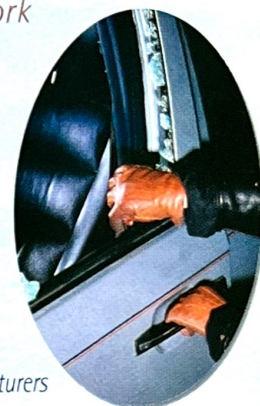

If you're still attached to your old cassettes or enjoy listening to your favorite book on long car rides, you can keep your current cassette deck.

Many CD changers now come with FM modulators that let you control and listen to your CDs through your current system's FM radio station – and leave your cassette deck intact.

### NEW FEATURES CONTINUE

the CD player the preferred method of mobile music enthusiasts everywhere. Most manufacturers are now using advanced **anti-theft deterrent technology** to decrease the likelihood of equipment loss. Eclipse has introduced its **Eclipse Security Network (ESN)**. A specialized disc is coded and must be inserted into the CD player if power is ever disconnected. Without the disc, the player will not function. Kenwood also introduced new security and convenience measures with its rotating faceplate **MASK technology**. The faceplate automatically rotates when the power is shut off, leaving your hands faceplate-free. Many manufacturers are also looking into easier controls for CD player operation. Sony, Eclipse and Alpine have introduced knob controls in their newest models. Knobs are easier and safer to operate when driving. Another advancement is the ability to combine other pieces of equipment with your CD player. Eclipse now has a CD player that hooks up to its navigation unit. Kenwood has a CD player with a video screen built-in.

### Speakers and Amps

**IF YOU WANT GOOD SOUND,** you need good speakers and an amp to power them – and you don't have to spend a lot to get it. These minor upgrades can drastically improve the sound from your car.

An amp can easily be installed in the trunk with no alterations to a leased vehicle. Many speakers come in drop-in sizes that can simply replace existing speakers and can be removed at the end of the lease. **Alpine is taking mobile entertainment to a whole new level with a Dolby® Digital surround sound system for your car.**

Turn this baby on and there's no telling where the sound will take you.

### Subwoofers

When you really want kickin' bass, you gotta have a subwoofer. Subwoofers fill out the sound in your car and add the extra punch that makes your stereo the envy of all. JL Audio has a full line of stealth enclosures that discretely house your subwoofer. No big black boxes in your trunk getting in the way when you're loading your SUV for the weekend. Everything is neatly packaged away

## And now for the techno stuff

### Power Output

A head unit is the component with either a cassette or CD player, AM/FM tuner and a built-in amp that drives your speakers. More power means cleaner music with less distortion.

### RCA Pre-Output

This output jack allows for an easy hook-up to an external power amplifier (highly recommended for much-improved sound).

### Full Logic

Full Logic or "Feather Touch" controls are easier on your tapes. That's because instead of pushing the button all the way down to activate the tape heads and motors, there's an electronic device that does it for you.

### Multi-Disc CD Changer

These "black boxes" mount in your trunk, under your seat or even in your glove compartment and deliver hours of continuous music. They can be controlled by a cassette deck/CD changer controller or by a wireless remote control. Available in 6, 10 or 12-disc units.

### FM Modulator

Allows you to connect your CD changer to your existing FM radio. Great for leased vehicles!

### Custom File or Program File

This feature, known by a few different names, has a built-in digital memory. It will store only your favorite tracks from up to 100 CDs. So when you next play that disc it will automatically play only the songs you want in the order you choose. Often you can name your discs with this feature.

### Power Amplifier

A power amp is the best way to drive your car stereo's speakers. It produces much cleaner power than the tiny amp that's crammed inside your head unit. Amps come in several different configurations. We'll assist you in choosing the correct one depending on your system design.

### 2-way or 3-way Speakers

A 2-way speaker has 2 distinct drivers layered on each other - a tweeter for highs and a woofer for lows. A three-way speaker has three drivers - one for highs, one for lows and one for midrange.

### Component Speakers

A component speaker system has a separate woofer and tweeter. This setup provides better sound dispersion for the highs, helping to create a more accurate stereo image.

### Subwoofer

Subwoofers are speakers dedicated to reproducing lower frequency sounds you feel as well as hear. Most subwoofers fit easily in trunks/hatchbacks or behind a truck's cab.

## Sony AM/FM CD Player

**\$159.99**

(CDX1150)

### Sony 10-Disc CD Changer

**\$239.99**

(CDX606)

**SONY**

- 8x oversampling digital filter
- 110-disc custom file memory
- One-bit pulse D/A converter

### Sony 10-Disc CD Changer

**\$279.99**

(CDX727)

**SONY**

- 8x oversampling digital filter
- Electronic shock protection
- Three-second 4Mbit memory
- 110-disc custom file memory
- CD text subcode reader

### Eclipse 8-Disc CD Changer

**\$329.99**

(5083)

- Anti-jitter laser lens
- Daisy chain compatible
- E-LAN data link protocol
- Tray load CD magazine

### Sony 10-Disc CD Changer/RF Package

**\$249.99**

(CDX424RF)

**SONY**

- Listen to your CDs through your FM radio
- Slim line display
- Wired remote
- Repeat, shuffle play

### Kenwood 10-Disc CD Changer

**\$269.99**

(KDCC712)

**KENWOOD**

- Integrated quad one-bit digital to analog converter
- Anti-vibration disc transport
- 100-disc naming capability
- Three angle mounting

### Alpine 6-Disc CD Changer

**\$299.99**

(CHMS620)

**ALPINE**

- High speed disc change
- See through magazine
- 0-90° adjustable mounting
- Anti-vibration DT mechanism

### Kenwood 10-Disc CD Changer

**\$349.99**

(KDCCX82)

**KENWOOD**

- 20-bit resolution integrated quad one-bit digital to analog converter
- Super capacitor memory
- Three angle mounting
- 100-disc naming capability

### Alpine 6-Disc RF CD Changer

**\$299.99**

(CHMS655RF)

**ALPINE**

- Integrates with factory radios
- Wireless remote control
- Regulated one-Bit DAC
- Repeat, shuffle play

## COAXIAL SPEAKERS\*

### Kenwood 6" Coaxial Speakers

**\$49.99/pr.**

(KFCS166)

**KENWOOD**

- 130-watt power handling
- PPS dome tweeter
- Polypropylene cone woofer

### Sony 6" Triaxial Speakers

**\$79.99/pr.**

(XSV1620)

**SONY**

**Xplod**

- Highly oriented polyolefine woofer cone
- 130-watt power handling
- Foam infused surround

### Alpine 6" Coaxial Speakers

**\$89.99/pr.**

(SPS1629)

**ALPINE**

- 120-watt power handling
- Rubber surround
- Collagen-coated colored cone

### Boston Acoustics 6" Coaxial Speakers

**\$99.99/pr.**

(CX6)

**Boston Acoustics**

- Butyl rubber surrounds
- Fluid cooled tweeter
- Reinforced steel baskets

### Eclipse 6" Coaxial Speakers

**\$119.99/pr.**

(8263)

**ECLIPSE**

- Rubber surround
- Frequency response 90 Hz-20 kHz
- Neodymium tweeter magnet

### Boston Acoustics 6" Coaxial Speakers

**\$149.99/pr.**

(RX67)

**Boston Acoustics**

- Broad off-axis response
- Butyl rubber surrounds
- Temperature-resistant woofer cone

## COMPONENT SPEAKERS\*

### Boston Acoustics 6" Component Speakers

**\$269.99**

(RC61)

**Boston Acoustics**

- Rigid steel baskets
- Butyl rubber surrounds
- Flush, surface and angle mounts for tweeters

### Kenwood 6" Component Speakers

**\$329.99**

(KFCXR60P)

**KENWOOD**

- DualMags woofer technology
- Tweeter attenuation crossover adjustment
- +/- 30 degree swivel tweeter mount

### JL Audio 6" Component Speakers

**\$379.99**

(XR650CS)

**JL AUDIO**

- 1" neodymium magnet/aluminum dome tweeter
- Competition grade outboard crossover network
- Long excursion woofer design

### Boston 6 1/2" Component Speakers

**\$449.99**

(65PRO)

**Boston Acoustics**

- Die cast aluminum baskets
- 400-watt max handling power
- Aluminum dome tweeters
- Audiophile grade crossover components
- Four different tweeter mounting options

"Boston's 6.5 speaker set offers a lot of very clever install options and excellent sound quality"

- Car Stereo Review Magazine

\* Speakers also available in many other sizes. See sales associate for details on mounting the size you need.

## SUBWOOFERS

### JL Audio 10" Subwoofer

**\$99.99**

(10W04)

- Designed for small enclosures
- 125-watt continuous power handling
- Four-layer voice coil
- Long excursion design

### Sony 10" Woofer

**\$79.99**

(XSL1030)

- 400-watt maximum input power
- 10" high rigidity compound
- Polypropylene cone
- Durable santoprene rubber surround
- Optimized for small enclosures

### Xtant 10" Subwoofer

**\$159.99**

(A104)

- 500-watt power handling
- Spring loaded terminals
- Polyurethane surround
- Strontium ferrite magnet

“Extreme low frequency reproduction is impressive”  
- Car Sound Magazine

### JL Audio 10" Subwoofer

**\$179.99**

(10W3D4)

- New dual voice coil design
- 250-watt continuous power handling
- Vented reinforcement collar
- Bumped backplate

### Boston Acoustics 10" Subwoofer

**\$269.99**

(PRO10.54)

- 1100-watt power handling
- Rigid die cast aluminum basket
- EPDM rubber surround
- Radial vent skirt

## WOOFER BOXES

### JL Audio PowerWedge Enclosure

**\$169.99**

(CS110RW0)

- 125-watt continuous handling power
- Five-way gold binding post connectors
- Built from MDF (not particle board)
- Sealed enclosure
- Uses one 10W04 woofer

### JL Audio PowerWedge Enclosure

**\$169.99**

(CS108TW0)

- 75-watt continuous handling power
- Gold plated connectors
- Dark grey carpet finish
- Sealed enclosure
- Truck enclosure grill included

### JL Audio PowerWedge Enclosure

**\$399.99**

(CS310RW0)

- 375-watt continuous handling power
- Rear firing design
- Uses three 10W012 woofers
- Built from MDF (not particle board)

## Kenwood 2-Channel Power Amplifier

**\$99.99**

(KAC428S)

**KENWOOD**

- 35 watts x 2 or 100 watts x 1 channel bridgeable
- MOSFET power supply
- Selectable low pass crossover
- Speaker level inputs

## Alpine 2-Channel Power Amplifier

**\$119.99**

(MRPT406)

**ALPINE**

- 40 watts x 2 channels or 120 watts x 1 channel bridgeable
- MOSFET power supply
- Low pass crossover
- Speaker level inputs

## Sony 2-Channel Power Amplifier

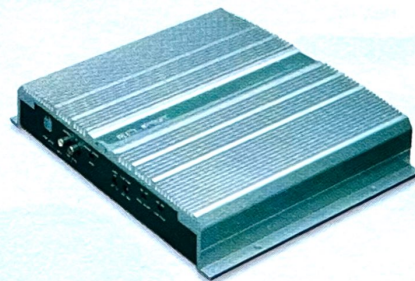

**\$229.99**

(XM1002HXR)

**SONY**

**Xplod**

- 100 watts x 2 or 250 watts x 1 bridgeable
- MOSFET power supply
- Variable low pass crossover (50-200Hz)

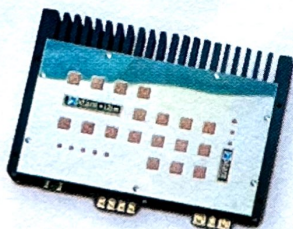

## Eclipse 2-Channel Power Amplifier

**\$229.99**

(3620)

**ECLIPSE**

- 40 watts x 2 channels or 120 watts x 1 bridgeable
- MOSFET power supply
- Low pass variable crossover
- Audiophile grade components

## Xtant Mono Bass Amplifier

**\$279.99**

(121M)

**xtant**  
Xtant Technologies Incorporated

- 125 watts x 1 at 4 ohms or 250 watts x 1 at 2 ohms
- 90Hz low pass crossover
- Fully regulated, PWM power supply
- Upgrade by using Xtant docking modules

## Alpine 4-Channel Power Amplifier

**\$349.99**

(MRVF303)

**ALPINE**

- 50 watts x 4 channels or 120 watts x 2 bridgeable
- MOSFET power supply
- Independent power supply circuit
- Built-in crossover

# who ya gonna trust?

**Who would you trust to install your next car stereo system?**

*Some kid straight out of high school or a professionally trained expert? A mass merchant or a national mobile electronics specialty retailer? Before you decide, let us explain why it matters.*

*The most important aspect of a good car stereo installation is who is doing the job. Today, cars are more complex than ever.*

**NEW TECHNOLOGY LIKE ADVANCED SENSORS AND COMPUTERS THAT MONITOR AND CONTROL EVERYTHING FROM AIRBAGS TO FUEL INJECTION ARE INTEGRATED THROUGHOUT TODAY'S VEHICLES.** *You want to be sure the new CD player you purchased isn't going to effect performance or safety while you are on the road due to poor installation. We address this issue by employing MECP certified installers. Being MECP certified is akin to receiving your pilots' license from the FAA.*

**The Mobile Electronics Certification Program is a national standardized testing system designed to ensure mobile installers use proper technique and are completely informed about all of the latest advancements in mobile electronics.**

*What does this mean to you? Our installers are trained to work on your car. Getting certified is just the beginning.*

**We have an ongoing training program for our installers which updates them on new vehicles and technologies.**

**We've earned our reputation of high quality installation bays with even higher quality workmanship. It's a reputation we fully intend to keep.**

*Our installation teams strive for total customer satisfaction by delivering an unmatched level of workmanship without the 'garage attitude.' We know your car is your baby and probably one of the biggest investments you'll make, so it is important to us that we treat it with the same amount of respect as we treat you.*

*The second most important aspect of your car stereo installation is the quality of parts used. When you buy a piece of mobile electronics from us you are buying some of the highest quality equipment on the market. Can you imagine having it installed with cheap mounting kits and wiring harnesses? All the performance and ergonomics you just paid for go right out the window. You'll find only the finest quality parts from METRA in our installation bays.*

*After all is said and done we stand behind our installations better than anyone. Our lifetime warranty covers all of the labor related to installing your mobile electronics.*

**If anything ever goes wrong with the installation, or the installation causes anything to go wrong with your vehicle, we will cover it. It's that simple.**

**Now, who would you trust?**

Caller ID/waiting service not included.

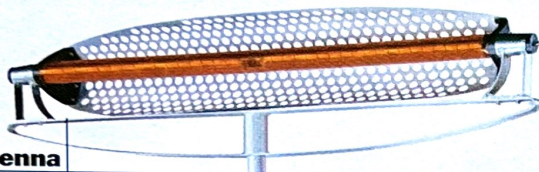

# entertainment by design

TERK concentrates on inventing creative, high-tech solutions to consumer electronics problems. Terk's innovative entertainment by design products have become a benchmark in the Consumer Electronics industry. In fact, Terk products have won numerous awards, including the Design and Engineering Award chosen by a committee of reviewers appointed by the Electronics Industry Association.

## Terk HDTV Antenna

**\$399.99**

(TV60)

- Reflector/shield minimizes multipath effects for improved HDTV performance
- Advanced shielding design reduces digital signal loss
- Improves VHF performance
- HDTV precisely calibrated impedance matched amplifier

## Terk TV Antenna for Satellite Systems

**\$79.99**

(TV42)

- Allows you to receive local broadcasting
- Patent pending clip allows for easy installation to dish
- Designed for use with dual LNB

## Terk Home Network

**\$179.99**

(HOMENETWORK)

- Transmits video sources to any TV through existing phone lines
- No disruption to telephone service
- Transmits remote control functions
- 500' transmission distance

## Terk Long Range Powered Antenna

**\$119.99**

(FMPRO)

- Engineered for superior reception
- Remotely switchable amplifier for varying reception conditions
- Easy installation indoors or outdoors

**Today, TERK antennas are used in almost three million households all over the world.**

Their innovative product line has grown over the past decade to include: AM/FM Antennas, in-car cellular antennas, indoor and outdoor TV antennas, multi-room, 900 MHz wireless speakers and an innovative remote control range extender.

## If the phone booth is gone where will Superman change?

**USED TO BE WHEN YOU NEEDED TO MAKE A PHONE CALL ON THE RUN, YOU SEARCHED YOUR POCKETS FOR A QUARTER AND HEADED FOR THE CLOSEST PHONE BOOTH.**

How times have changed. Now making a call is as simple as taking your cell phone from your pocket and dialing the number. And if you've already programmed the number into speed dial, the whole process can be done at the push of a button. Good news for people on the go. Bad news for damsels in distress caught without their cell

phones and forced to rely on the quick change efforts of Clark Kent.

Analog, the granddaddy of cellular, carries messages that are identical to ordinary radio and are subject to interference.

**THE NEWER DIGITAL MODELS RELY ON INTERNAL SOFTWARE TO CONVERT THE MESSAGES TO DIGITAL INFORMATION.**

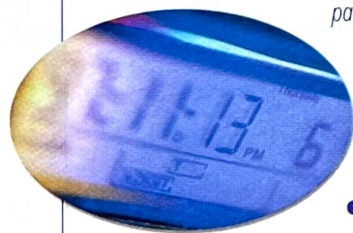

This digital information is then transmitted in a format that eliminates interference for the listener. Digital gives you better voice quality and more privacy from scanning devices that pick up your signal and gives a third

party access to your conversation. Digital phones also have additional features such as voice mail and caller ID. Some digital phones can also **accept text messages and email.** Digital phones are typically smaller and

lighter than analog and have extended battery life. While

digital network service is expanding to keep pace with its growth, the network coverage area is not as extensive as analog networks in rural areas.

**The latest, most exciting digital technology to hit the cellular market is Sprint's Personal Communications Service (PCS).** Sprint PCS transmits messages over larger frequencies than conventional digital. This allows for greater network capacity and data capability for people who are on the go but need to stay connected in a wireless world.

### Sprint PCS delivers:

- Call clarity comparable to your home or office phone
- The only 100% digital, 100% PCS, nationwide network built from the ground up for a new level of clarity
- Secure connections (reduced risk of eavesdropping)

Sprint PCS also gives you 24-hour dial up Internet access to popular web sites such as CNN, the Weather Channel, ESPN and more. The Interactive Handset Browsing feature enables customers to pull information directly from the Internet to their handset via a MiniBrowser built into the phone. These browser ready handsets will be able to access over 30 websites developed with HDML (handheld device mark-up language) to check weather reports, sports scores, stock reports, travel information, yellow page listings and much more.

**Customers can also receive their favorite Internet updates from Yahoo! automatically.**

For instance, if you check a certain stock or want to know the weather every day, you can use the Text Messaging technology to get this information daily. The Sprint PCS Free and Clear Plan<sup>SM</sup> gives you a variety of plan options ranging from just \$29.99 with 120 free minutes included to \$149.99 with a whopping 1500 free local or long distance minutes.

**That's a lot of talking!** The Sprint Free and Clear Plans let you receive free long distance on calls made to anywhere in the U.S. from anywhere on the Sprint PCS Nationwide Network. Plus, you pay no network roaming charges on calls made from any city within our digital network. Another fun advancement in cellular technology is pure aesthetics. Phones are no longer clunky black bricks. Today's cell phones come in bright, vibrant colors or slick chrome-plated finishes. Some even allow you to swap faceplates so that your phone always matches your outfit. Form follows function with compact models not much bigger than a money clip and weighing in at a mere seven and a half ounces or upscale, ergonomically designed models that are easy to carry in any situation.

## So many options. So much time.

When deciding which service is right for you, you first need to assess your cellular needs. **If you plan to use your cell phone only in emergency situations, choose the least expensive service plan.** Be careful, however, not to skimp on minutes. It may be more cost effective to bump up to a plan with a higher monthly fee which includes more airtime than to pay per minute on each call.

Once you establish how often you will use your cell phone, **think about where you will use it.** If you don't travel much outside of your home usage area, local coverage may be sufficient. If you travel within a set geographic region or metro area, a regional plan that enables you to make a call without incurring roaming or long distance fees is a good option. If you travel throughout the country, the most effective plan is a nationwide plan. **Nationwide plans offer a good value for heavy users who are frequent travelers.** Keep in mind that although it is called a nationwide plan, there may be some remote locations that are not accessible. Always ask your plan provider about coverage areas.

If you travel outside of the United States, you will need to have access to the GSM (global system for mobile communications) digital network. This network is used throughout most of the world and provides reduced rates for wireless calls to other countries.

With free long distance you'll get worry-free calling. With the **Sprint PCS Free and Clear plan.**

## And now for the techno stuff

### Analog

*This is the conventional means by which signals are sent and interpreted, using radio waves. It's a good system but it's not as clear as the digital systems.*

### Caller ID

*Imagine you've brought your cellular phone to an important meeting. This feature allows you to screen your calls and pick up only those that are urgent.*

### Dual Band

*With this feature, your system will switch from PCS to analog automatically. This way, you can use your superior digital network right up until you move out of range, at which time it will default to an analog system, preventing you from losing any phone calls.*

### Free and Clear Plan<sup>SM</sup>

*Gives you a variety of plan options ranging from \$29.99 with 120 free minutes included to \$149.99 with 1500 free local or long distance minutes.*

### Interactive Handset Browsing

*Enables customers to pull information directly from the Internet to their handset via a MiniBrowser, which is built into the phone. Check stock reports, weather, sports scores, travel information and yellow pages listings on more than 30 websites.*

### Personal Communications Service (PCS)

*This technology, brought to you by Sprint, transmits messages over larger frequencies than conventional digital, allowing for greater network capacity and data capability. Designed for, but not exclusive to, the frequent traveler.*

### Voice Mail

*A message box for your cellular phone. Although your cell phone is convenient enough for you to carry constantly, you may not want to constantly answer your phone.*

# CELLULAR PHONES

## Qualcomm Sprint PCS Phone

## we're taking it to the streets

**"ARE WE THERE YET?"**

**"ARE WE THERE YET?"**

**"ARE WE THERE YET?"**

**"YET?"**

Sound familiar? These calls from the backseat every ten minutes or so are but a distant memory for owners of mobile video technology. A video screen in your vehicle used to seem like an extravagance. But it's no longer extravagant to ensure that your children behave while you're on the highway. A compelling movie is a great way of taming your passengers.

**And now that mobile video is affordable and practical,** its popularity isn't likely to level off anytime soon. It's too useful.

**The kids can sit, secure in the the backseat, watching Toy Story or A Bug's Life**

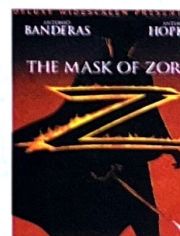

on your TV/VCP (Video Cassette Player). Or they can take in the film on an in-dash CD/DVD video player. Then, when they drift into sleep, you can take

out the DVD and pop in a relaxing CD. As much as your kids are likely devoted to watching movie after movie time after time. They are probably equally committed to **playing video game after video game, hour after hour.** Many systems have hook-ups for the video game systems that are probably already in your living room. A roadtrip can be a lot easier on both you and your children if they can bring **MARIO OR POKEMAN** along for the ride. It is also possible to **mount a Sony Playstation, for instance, to the back of the seat.**

All this technology may seem too good to be true for the parent, who has been through even a couple hours of, "are we there yet, are we there yet". But think back to the last time that you tried to talk to your kids while they were playing video games or watching a Disney movie. And enjoy a nice, pleasant drive.

**"DAD! I HAVE TO GO TO THE BATHROOM!"**

The above titles are available on DVD.

**Audiovox Flip Down Video System**

**\$1,599.99**

(Podpack)

Take your favorite programs on location with this unique overhead flip down pod. Easily viewable by all backseat passengers with a 6.1 inch LCD monitor and 3 stereo audio-video inputs. Front panel power contains the power switch, volume up/down control, infrared repeater eye, 1 set of auxiliary audio/video inputs (for camcorder/game use), source selector, source selector LCDs and two headphone jacks for private listening. Rear panel has 3 audio/video (includes Video Cassette Player so you can watch your favorite movies on the road), inputs (one reserved for TV tuner) and variable (headphone level) audio output jack. The pod also has built-in dome lights. It is designed to work with stand alone mini roof consoles or with vehicle specific overhead consoles and can be matched to most car interiors. The PodPack comes with guaranteed installation.

\*Due to driver safety, videos or TV can only be watched when the emergency brake is engaged, if visible from the front seat. Products may not be available in all stores. Please call to check on specific products

### Alpine In-Dash CD/DVD Video Player

**\$1,199.<sup>99</sup>**

(DVA5200)

**ALPINE**

Back seat whining during long drives can be a thing of the past. Alpine's mobile DVD player allows you to bring the movie theater experience with you wherever you go - stifling the complaints and providing for a peaceful drive. This compact system installs in your dashboard but it does not compromise the quality that you are accustomed to with your home DVD system. This unit comes complete with, RCA audio and visual outputs, digital optical output, and a full wireless remote. It will also play your CDs!

### Kenwood In-Dash Mobile Television/CD Player

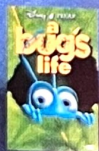

**\$1,999.<sup>99</sup>**

(P907)

**KENWOOD**

This unit includes a 5.8-inch retractable LCD for watching videos or TV with the built in tuner\*. The screen has adjustable viewing angles and since it is 'DIN' sized it will fit in almost any vehicle on the road today. A built in single CD player allows you the convenience of changing CD's in the cabin or you can add a CD changer for long, uninterrupted music listening. You can control this multi media system via the touch screen GUI (graphic user interface) control or the supplied wireless remote control. Four volt output delivers clear noise free signals to your amplifiers for great music reproduction or you can use the 40-watt x 4-channel high-power amplifier in the unit.

A Bug's Life is  
available on DVD.

# QUESTIONS & ANSWERS

## About The Tweeter Guaranteed Performance Agreement

**Q** I'm purchasing top-quality equipment. Why should I worry about reliability?

**A** Overall, reliability is very good. But it is a simple fact that any piece of equipment that generates heat or has moving parts is prone to wear.

Also, today's components are generally much more complex, with many more parts, and so many more potential sources of problems.

**Q** Isn't the manufacturer's warranty enough?

**A** It has been the experience of many people that the manufacturer's warranty is inadequate in protecting them against high repair charges.

Some warranties are just too short, period. They'll cover the equipment for a few months, which may be enough for a gross manufacturing defect to appear, but it does little or nothing for problems that will only crop up with continued use.

**Q** How important is maintenance?

**A** Extremely important. You wouldn't expect your automobile to continue running trouble-free if you didn't change the oil and have it tuned-up occasionally. And you shouldn't expect a component as complex as say, a video recorder, to maintain its original high level of performance without being regularly cleaned and checked.

Most maintenance procedures require the expertise of a technician. Thoroughly checking the performance of a component requires the use of sophisticated equipment rarely found outside a repair shop.

**Q** Does the Tweeter Performance Package cover maintenance?

**A** YES. You are entitled to one cleaning and performance check per year of your contract.

Members of Tweeter's nationally acclaimed service center in Canton, MA.

**Q** What else is different about the Tweeter Performance Package?

**A** Products covered under the Tweeter Performance Package receive priority status when they come into the repair facility. This ensures that you'll be without your equipment for the shortest time period possible.

**Q** What about the cost?

**A** With our unique maintenance aspect, many of our customers recoup the entire cost of the agreement just by having routine maintenance performed on a regular basis. In the event the equipment has even the most minor problem during the agreement, the owner comes out way ahead.

**Q** What if I don't keep the equipment very long.

**A** The Tweeter Performance Package is fully transferable to any party you give or sell your

protected product to. The Tweeter Performance Package actually helps the product retain more of its original value. Think about how much more attractive your product would be if the receiving party knows it's still covered for the life of the agreement.

**The answer is clear...**

- ☐ Extended coverage that protects you from high repair bills.
- ☐ Routine maintenance means your components keep performing at their best.
- ☐ Coverage is completely transferable- enhancing your component's resale value.

**The Tweeter Performance Package is an excellent value!**

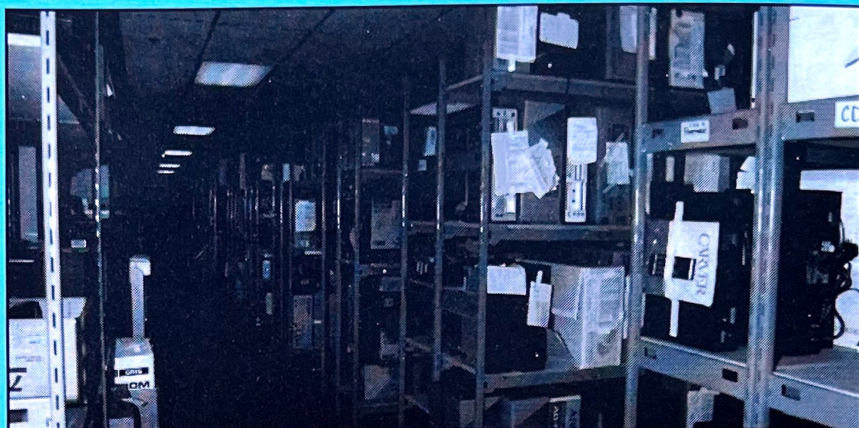

**Tweeter**  
for times like these etc.

# SERVICE SECOND TO NONE.

## Tweeter's Well-Respected Service Department Puts Customer Satisfaction in Our Guaranteed Performance Agreement.

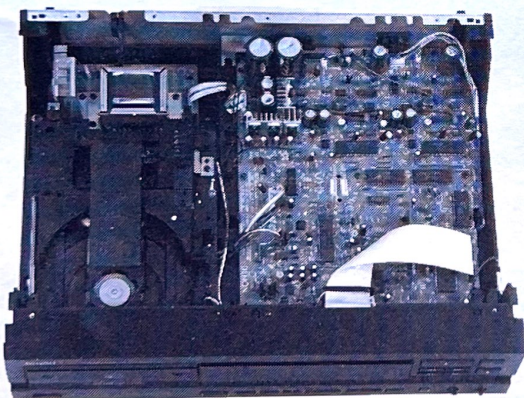

Using some of the most sophisticated (and environmentally safe) diagnostic equipment available, Tweeter etc.'s 10 service technicians (with over 120 years of combined experience) perform precision tests and cleaning procedures to ensure optimum performance of the following products and their parts or systems:

During a maintenance check, all the below listed functions are cleaned, checked and, if necessary, adjusted or replaced.

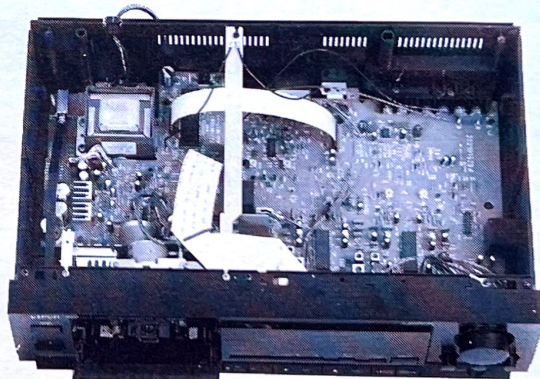

### Compact Disc Players

- ☐ Laser output
- ☐ Focus and tracking (if applicable)
- ☐ Optical sled drive
- ☐ Tray and all other mechanisms

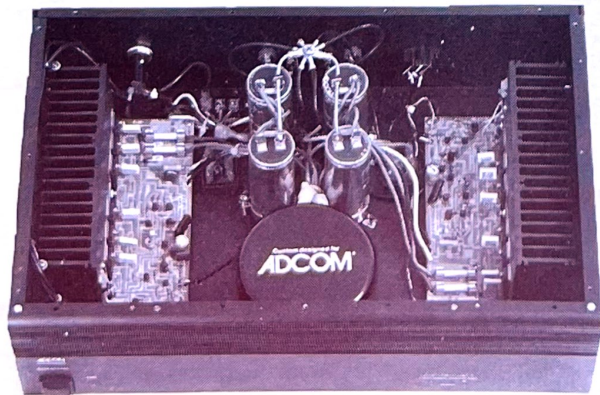

### CASSETTE RECORDERS

- ☐ Tape path
- ☐ Tape Speed
- ☐ Wow and flutter content
- ☐ Tape head alignment
- ☐ Playback/record frequency response
- ☐ Record bias (set for preferred tape style)

### RECEIVERS & SEPARATES (Tuners, amps. etc.)

- ☐ Ground points
- ☐ Switches and controls
- ☐ Solder connections
- ☐ FM tuning detector at Multiplex stage

### BIG SCREEN PROJECTION TELEVISIONS

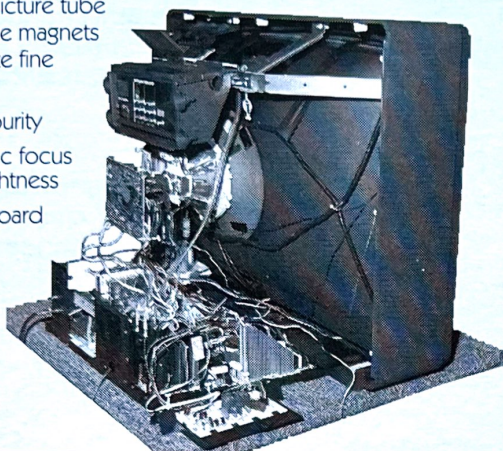

- ☐ High voltage
- ☐ "Gray scale" on all three projection tubes
- ☐ Focus
- ☐ Convergence bow and skew
- ☐ Mirrors
- ☐ "Green scale"

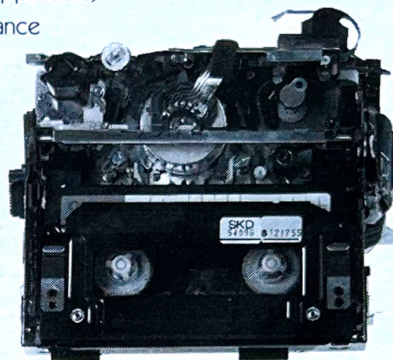

## **DIRECT VIEW TELEVISIONS**

- ☐ General Cleaning
- ☐ Adjust picture tube and tube magnets
- ☐ Complete fine tuning
- ☐ Picture purity
- ☐ Electronic focus and brightness
- ☐ Circuit board Integrity

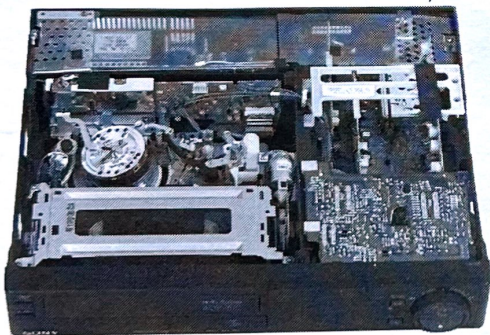

## **CAMCORDERS**

- ☐ Record function
- ☐ Color balance
- ☐ Auto-focus (if applicable)
- ☐ Auto white balance
- ☐ Tape motion
- ☐ Tape path, drive surface and heads
- ☐ Tape back tension
- ☐ Lens assembly and electronic viewfinder
- ☐ Battery
- ☐ 2-hour test functions

## **VIDEO RECORDERS**

- ☐ Tape path
- ☐ Video/audio heads
- ☐ Video/audio frequency response
- ☐ Reel table and guide alignment
- ☐ Tracking and servo alignment
- ☐ Tape transport operation
- ☐ Tuner and Automatic Fine Tuning alignment
- ☐ Record/playback quality

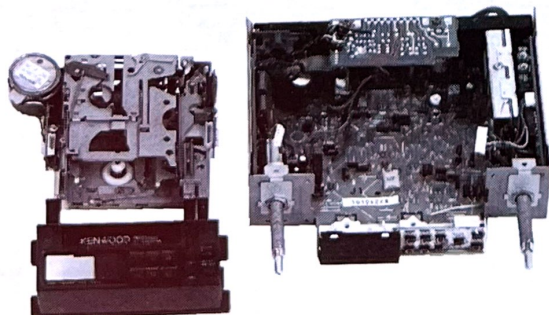

## **CELLULAR PHONES**

- ☐ Master oscillator for transmitter and receiver
- ☐ SAT transponder
- ☐ Receiver sensitivity
- ☐ Power output limits
- ☐ Hands-off, call placement and call reception
- ☐ Batteries, power cords, chargers and antenna
- ☐ Programming function

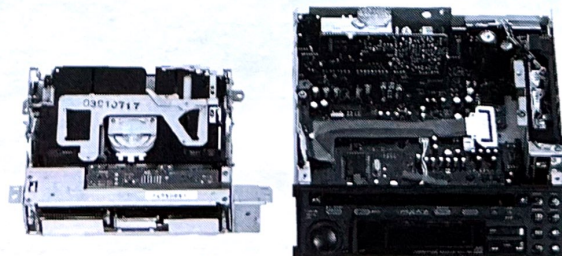

## **CAR DECKS**

- ☐ Tape path
- ☐ Tape Speed
- ☐ Wow and flutter content
- ☐ Tape head alignment
- ☐ Tape guide height
- ☐ Playback/r frequency response
- ☐ Necessary lubrication/cleaning

## **CAR CD PLAYERS**

- ☐ Laser output power
- ☐ Focus and tracking
- ☐ Sensitivity to road vibration
- ☐ Optical sled drive
- ☐ Disc loading/eject mechanism
- ☐ AM/FM alignment (If applicable)
- ☐ General cleaning

## In addition...

☐ **Maintenance included in all Performance Packages.** Periodic cleaning and maintenance will prolong the life and enhance the performance of your electronic equipment.

☐ **The plan is transferable.** If you sell your component during the Tweeter Performance Package coverage period, the coverage is transferred to the new owner. In this way, the plan enhances the resale value of your equipment.

☐ **If you move, you're still covered.** The Tweeter Performance Package covers the cost of repairs, no matter where you move in the continental United States.

☐ **Tweeter etc.'s complete dedication to customer service has been an integral part of our success story since the company's inception in 1972. These high standards led us to create a program that is significantly more comprehensive than others you may have seen.**
